Cyberspace

Who am I?

- There is currently no RFC Series Editor
- I'm holding the fort until mid-2021
- RSE duties currently split
  between the RSOC and me

RFCs in XML

- About 95 RFCs since October
- Tool debugging harder than expected
- Some issues with XML vocabulary
- Many issues with output, particularly HTML and PDF
  - PDF is generated from the HTML
- Since output is not canonical, how much do we care?
  - We can debug the tools and re-render
- SLA still on hold
  - Until toolset shakes out

XML vocabulary

- We expected changes after V3

- Change process not well managed

- Documentation way behind the code
    - Will have to decide when V3.1 is done
    - Back out some elements and revise existing coding (not content)?

I18N

- Allowed in most places, typically, author name and address
- Technically not hard
  - Give or take layout of mixed scripts
- Proofreading non-trivial non-English text is hard
