JMAP extensions for S/MIME signature verification
draft-ietf-jmap-smime-02
Alexey Melnikov <alexey.melnikov@isode.com>
Changes in -02

• Added “smimeVerifiedAt” property

• When was S/MIME verification (returned in "smimeStatus" and "smimeErrors") performed last time

• Clarified that "smimeErrors" can be affected by language selection
Open issues

• Should we allow requests like "what was the signature verification status at date X"? This would affect time used to check certificate validity.
What to do next?

- Other than the open question this is ready for WGLC
