JMAP extensions for S/MIME signature verification

Alexey Melnikov <alexey.melnikov@isode.com>

Changes in -02

- Added "smimeVerifiedAt" property

  - When was S/MIME verification (returned in "smimeStatus" and "smimeErrors") performed last time

- Clarified that "smimeErrors" can be affected by language selection

Open issues

- Should we allow requests like "what was the signature verification status at date X"? This would affect time used to check certificate validity.

What to do next?

- Other than the open question this is ready for WGLC
