

GNAP Process Proposal

Leif Johansson and Yaron
Sheffer

IETF-109, Nov. 2020

Principles

- The WG is the final decision maker about both process and content, and the mailing list is where (difficult) decisions are made
 - If we choose to employ GitHub, we will be guided by:
 - RFC 8874: Working Group GitHub Usage Guidance
 - RFC 8875: Working Group GitHub Administration
 - Maximum transparency
 - Management of documents in GitHub repos has a long history and is generally non-controversial
 - E.g. TLS 1.3 draft since 2014
 - Issue management is more challenging
-

Proposal: Documents

- Small editorial edits with GitHub pull requests
 - No change to meaning, certainly no normative change
 - Pull Requests for all significant changes, linked to issues
 - This encourages a review process, possibly on list
 - Any documents must be published at least once per IETF period, preferably also after any meaningful changes
 - Wikis, GitHub discussions etc. are not a record of the WG activity
 - If you want something published, get it into an I-D!
-

Proposal: Issues

- We propose RFC 8874 “Issue Discussion Mode”
 - Long document reviews are generally on the mailing list
 - After ML discussion settles, reviewer opens issues on GH
 - WG is informed of new issues (automatically?)
 - Further issue discussion mostly on GH
 - Issue labelling: Design vs. Editorial, other labels TBD
 - Weekly (automated) summary to the ML (sample follows)
 - Editorial team closes resolved issues, implements them in the draft (PRs welcome)
 - Issues point to PRs, and vice versa
 - The team should bring difficult cases to the list and to meetings
 - And so can any other WG participant
 - No reopening issues other than by WG consensus
 - Chairs may call for consensus on the list
-

Example Weekly Report

Sunday November 08, 2020

Events without label "editorial"

Issues

ietf-wg-gnap/core-protocol (+22/-2/06)

22 issues created:

#27 [RS Response for Speculative Access](#) (by yaronf)

#13 [Syntax of Flags](#) (3 by jricher, yaronf)

...

2 issues closed:

#26 ["updated_at" Format](#)

#25 [Access Token Format](#)

Pull requests

ietf-wg-gnap/core-protocol (+1/-1/00)

1 pull requests submitted:

#28 [Added authors.](#) (by jricher)

1 pull requests merged:

#28 [Added authors.](#)
