

### Virtual IETF meetings with WebRTC

Lorenzo Miniero lorenzo@meetecho.com

IETF 109 – MOPS WG November 17<sup>th</sup>

Passive attendee

https://commcon.xyz/session/turning-live-events-to-virtual-with-janus

### Janus

General purpose, open source WebRTC server

- https://github.com/meetecho/janus-gateway
- Demos and documentation: https://janus.conf.meetecho.com
- Community: https://groups.google.com/forum/#!forum/meetecho-janus

- Not strictly speaking a Virtual event, but close enough
  - One or more people talking, and a (wide?) audience
  - During Covid, many podcasts done remotely (e.g., "Conan needs a friend")
- WebRTC a good fit for the conversation part
  - Easy to have a chat just using your browser
  - Broadcasting could be done with WebRTC too!
- May make sense to have the conversation mixed, though
  - If broadcasting with WebRTC, the more the speakers, the more the bandwidth
  - If NOT broadcasting with WebRTC, you need a mix to transcode anyway
  - More control on additional media (e.g., pre-recorded content)
- How to optimize mixing with the ability to bring people in in a scalable way?

Janus + AudioBridge plugin

Listener 3

- Mostly a one-to-many scenario
  - A single presenter (maybe more than one video, e.g., screensharing)
  - Multiple passive viewers
- Can sometimes be "conversational" like a podcast, though
  - e.g., Q&A session, interview, or panel discussion
- As before, WebRTC definitely a good fit for publishing
  - Browsers support screensharing natively
  - Broadcasting could be done with WebRTC too! (but more streams, now)
- Video(s) may or may not be mixed
  - In both cases, still needs to be distributed to all participants

ANRW120 - Welcome and introduction.pdf (page 6 of 10)

#### Some notes on Meetecho

Videos are pre-recorded, so we will take questions at the end of each presentation!

To ask a question. enter the queue (mic+hand logo). then the chairs will call you out and enable your audio!
