Stig Venaas presenting

Overview

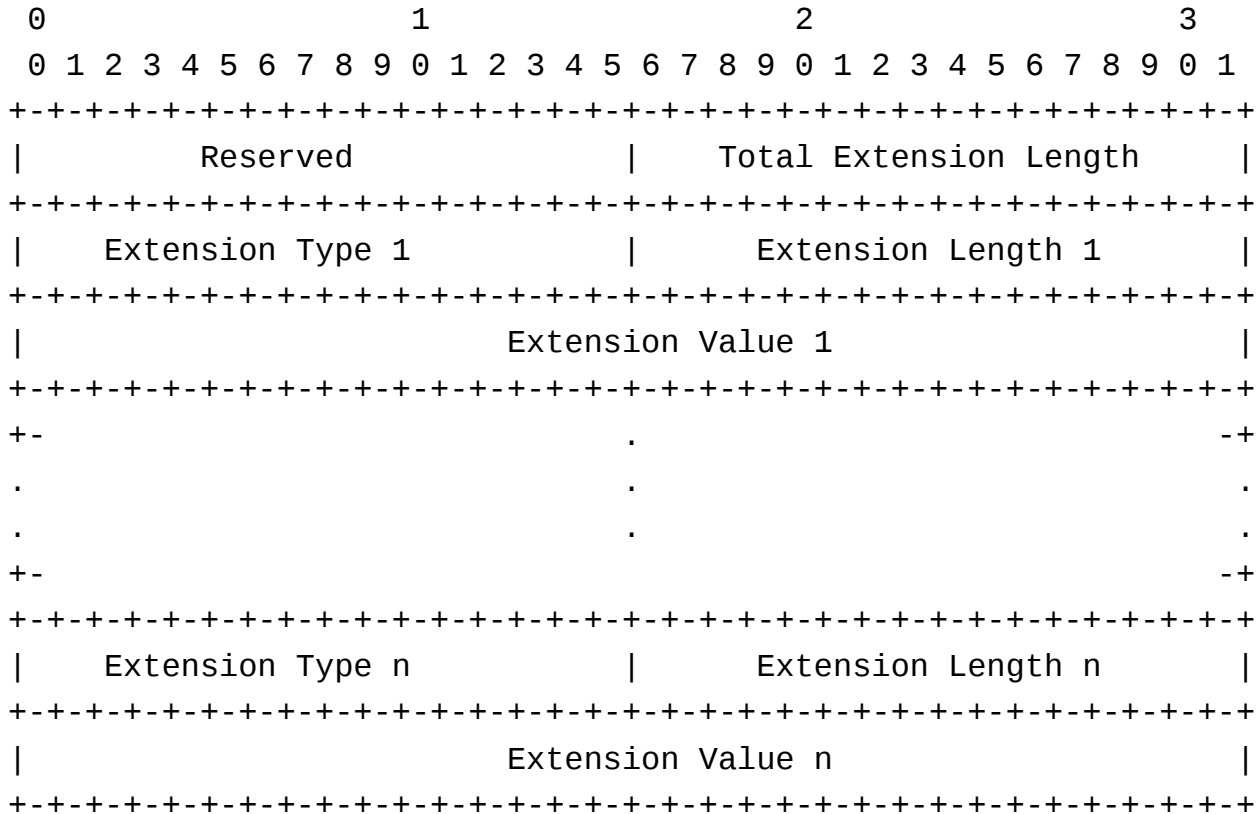

- A generic way of extending IGMPv3/MLDv2 messages
 - Defines extension TLVs and a registry
 - BIER extension moved to IGMP/MLD overlay (draft-ietf-bier-mld)
- Main changes since revision 01
 - Added text on what must be specified in documents defining new types, such as backwards compatibility.

Using a currently reserved bit to indicate this extension is used

A query looks like this:

Extension TLVs
