mario.loffredo@iit.cnr.it

- Version 05:
 - Rearranged the content to consider reverse search not only based on the domain-entity relationship
 - Reorganized “Abstract”
 - Defined rdapConformance value "reverse_search" to signal conformance with this specification
 - Added “RDAP Conformance” and “IANA Considerations” sections

- EU is working on “E-evidence”
 - https://ec.europa.eu/info/policies/justice-and-fundamental-rights/criminal-justice/e-evidence-cross-border-access-electronic-evidence_en
 - The goal is to make it easier and faster for police and judicial authorities (e.g. Europol) to access the electronic evidence
 - Authorities should be able to access unpublic registry data without submitting written requests
 - The proposal is expected to become EU Directive or Regulation

- Cooperation between national authorities and CENTR registries
 - *63rd CENTR Legal & Regulatory Workshop (22-23 September 2020)*
 - Authorities request registries to access unpublic registry data:
 - for legitimate interests
 - under a cooperation agreement
 - Registries should provide authorities with fast access to those data
 - Some national regulations are being reviewed to meet these requirements
