Rich Call Data PASSporT extension

draft-ietf-stir-passport-rcd-07/8/9

STIR Working Group
IETF109

COMCAST

Overview

- Mostly editorial updates, received some reviews of text and integrated fixes

- Some clarification on compact form to follow sipcore-callinfo-rcd

- Added P-Asserted-Identity as an alternative source of "nam"

- Fixed array brackets in examples for "dest" claim

- Clarified that for "jcl" jcard URIs "The web server MUST use the MIME media type for JSON text as application/json with a default encoding of UTF-8. [RFC4627]."

- From our perspective getting pretty mature, we have a corresponding document in IPNNI that we are getting closer to letter ballot

COMCAST

draft-ietf-sipcore-callinfo-rcd updates

- Starting to get some implementation/interop of RCD

- Question: if RCD info only has "nam" and "call-reason" and no jcard, what should the URL of the call-info header be?

- Should "call-reason" also require "cid" style link into body for the call-reason string, or should we find other alternative?

COMCAST

Next steps?

- rcd is still looking good, need little more work on call-info document, but likely going to try to fast track that, so more review is requested.
