Emergency Services RPH extension
draft-ietf-stir-rph-emergency-services-04

STIR Working Group
IETF109

COMCAST

Overview

- Major update to claims, which i think better aligns with rph more generally based on comments on the list from Jack Rickard

- Use of "auth" for "esnet.x" identifier vs "ESOrig" and "ESCallback"

- "sph" stays the same as before

- Examples:

```
{
  "orig":{"tn":"12155551212"},
  "dest":{"uri":["urn:service:sos"]},
  "iat":1443208345,
  "rph":{"auth":["esnet.1"]}
}
```

```
{
  "orig":{"tn":"12155551213"},
  "dest":{"tn":["12155551212"]},
  "iat":1443208345,
  "rph":{"auth":["esnet.0"]},
  "sph":"psap-callback"
}
```
