New ASN.1 Modules for the Evidence Record Syntax (ERS)
draft-housley-ers-asn1-modules-00

Abstract

The Evidence Record Syntax (ERS) and the conventions for including these evidence record in the Server-Based Certificate Validation Protocol (SCVP) are expressed using ASN.1. This document updates those ASN.1 modules to conform to the 2002 version of ASN.1 and employ the conventions adopted in RFC 5911, RFC 5912, and RFC 6268. There are no bits-on-the-wire changes to any of the formats; this is simply a change to the ASN.1 syntax.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 19 August 2021.

1. Introduction

Some developers would like the IETF to use the latest version of ASN.1 in its standards. This document provides alternate ASN.1 modules to assist in that goal.

The Evidence Record Syntax (ERS) [RFC4998] provides two ASN.1 modules, one using the 1988 syntax [OLD-ASN1], which has been deprecated by the ITU-T, and another one using the 2002 syntax [NEW-ASN1], which continued to be maintained and enhanced. This document provides an alternate ASN.1 module that follows the conventions established in [RFC5911], [RFC5912], and [RFC6268].

In addition, [RFC5276] specifies the mechanism for conveying Evidence Records in the Server-Based Certificate Validation Protocol (SCVP) [RFC5055]. There is only one ASN.1 module in [RFC5276], and it uses the 1988 syntax [OLD-ASN1]. This document provides an alternate ASN.1 module using the 2002 syntax [NEW-ASN1] and follows the conventions established in [RFC5911], [RFC5912], and [RFC6268]. Note that [RFC5912] already includes an alternate ASN.1 module for SCVP [RFC5055].

The alternate ASN.1 modules in this document get some of their definitions from places different than the modules in [RFC4998] and [RFC5276]. The idea is that these alternate ASN.1 modules, when combined with the modules in [RFC5911], [RFC5912], and [RFC6268] can stand on their own. These modules do not import definitions from anywhere else, some of which are somewhat difficult to find.

2. ASN.1 Module for RFC 4998

4. IANA Considerations

IANA is requested to assign two object identifiers from the "SMI Security for LTANS Module Identifier" registry to identify the two ASN.1 modules in this document.

The assignment of these object identifiers is requested:

1.3.6.1.5.5.11.0.1.2	id-mod-ers-v2	[ThisRFC]
1.3.6.1.5.5.11.0.5.2	id-mod-ers-scvp-v2	[ThisRFC]

5. Security Considerations

Please see the security considerations in [RFC4998] and [RFC5276]. This document makes no changes to the security considerations in those documents. The ASN.1 modules in this document preserve bits-on-the-wire as the ASN.1 modules that they replace.
