

VALARM Extensions

draft-ietf-calext-valarm-extensions-07

Cyrus Daboo

Ken Murchison

Changes since IETF 109

- Updated ABNF to *actually* be extensible.
- Switched to using a VLOCATION subcomponent rather than the (deprecated) STRUCTURED-LOCATION property for proximity alarms.
- Reorganized and clarified the process of snoozing and alarm and added an example.
- Approved by IESG and in RFC Ed Queue.
