IMAP QUOTA extension

draft-ietf-extra-quota-04.txt
Alexey Melnikov <alexey.melnikov@isode.com>

Goals/History

- Revision of RFC 2087. RFC 2087 was heavily underspecified

- Based on an earlier draft co-edited with Dave Cridland

Changes done in WG -04 since -03

- Clarified that this extension is compatible with both IMAP4rev1 and IMAP4rev2

- Updated example to use .example domain

- Some minor clarifications in the IANA Considerations section

- Added a security requirement not to disclose personal quotas to anonymous users, due to information leakage

- Removed "OVERQUOTA tag" variant due to syntactic IMAP limitations. Added text explaining that OVERQUOTA response code in an untagged response can possibly be ambiguous (current mailbox versa APPEND/COPY/MOVE target mailbox)

Next steps

- Ready for WGLC
