

# Sieve Snooze

draft-ietf-extra-sieve-snooze-01

Ken Murchison

Ricardo Signes

Neil Jenkins

# Changes since IETF 109

- Disallow both *:mailboxid* and *:specialuse* in the same snooze action.
- Specified that snooze cancels implicit keep.
- Specified that implementations **MUST** use a special “snoozed” mailbox.
- Added registration for \Snoozed Special-Use Attribute for IMAP and JMAP implementations.
- Added example of manipulating IMAP flags at both snooze time and awoken time.

# Next Steps

- Any additions, changes, or issues?
