# Process and Timeline

- Architecture draft-06 released today
  - A lot more work than anticipated, and a lot of remaining work.
  - More security and privacy considerations in the current doc.
  - Some restructuring of the functional requirements.
  - Changes are mostly editorial and don't affect previous decisions.
- On time to synchronize the two RFCs (approx. 3-6 months).
- Next steps:
  - Determine what is missing from the document and what should be (re)moved.
  - The current goal is to discuss what is missing from, or incorrect in the document.
    - Don't hesitate to have a look and open issues.
    - Sync with the authors if you want to contribute PRs.
    - Reaching out to Konrad and al. about security considerations.
    - Reaching out to Brendan to add a use cases section.
  - Server Assist document with Raphael.
