Introduction (I/II)

- RFC 6282: the basis for header compression in 6Lo(WPAN)
 - Designed for IEEE 802.15.4 as the target technology
 - Adapted/Reused for *relatively* similar IoT technologies
 - Compressed IPv6/UDP header size of **7 bytes**
 - Best case, with global addresses
- RFC 8724 (aka “SCHC”), a product of the LPWAN WG
 - Adaptation layer functionality:
 - **Header compression**
 - Fragmentation
 - Designed for even more constrained (LPWAN) technologies
- SCHC header compression
 - Compressed IPv6/UDP header size of e.g. **1 byte**
 - Best case, with global addresses
 - Static Context: exploit a priori knowledge of header field values

Introduction (II/II)

- Compressed IPv6/UDP/CoAP header size
 - 6Lo(WPAN) compression: **11 bytes**
 - SCHC compression: **e.g. 2 bytes**
- Theoretical battery lifetime improvement over IEEE 802.15.4 by up to ~40%
 - Including also a 1-byte SCHC Dispatch (see later)
 - Actual improvement will be lower, depending on various parameters and features: device hardware, MAC settings, application settings, payload size, etc.

- Best case, global addresses
- No CoAP header options

Status

- draft-gomez-6lo-schc-15dot4-00
- Strictly speaking, not really a -00:
 - Extended version of draft-gomez-6lo-schc-dispatch-01
 - Greater scope
 - Transmission of SCHC-compressed packets over IEEE 802.15.4 networks
 - Aims to incorporate feedback from previous meetings

Protocol stack

```
+-----+
| CoAP, other|
+-----+
| UDP, other |
+-----+
|   IPv6   |
+-----+
| 6LoWPAN HC |
+-----+
|6LoWPAN Frag|
+-----+
| 802.15.4  |
+-----+
```

Current
6Lo(WPAN)

```
+-----+
| CoAP, other|
+-----+
| UDP, other |
+-----+
|   IPv6   |
+-----+
|  SCHC HC  |
+-----+
|6LoWPAN Frag|
+-----+
| 802.15.4  |
+-----+
```

<-- NEW

Proposed alternative
6Lo(WPAN)

Frame format (I/II)

- Frame format (i.e. L2 frame payload)
 - Encapsulated SCHC compressed packet:

– SCHC Dispatch:

- Signal that a SCHC Packet comes next
- 6LoWPAN Dispatch Type for SCHC header compression
- SCHC Dispatch pattern is the Paging Dispatch (1111WXYZ)
- Whole page (RFC 8025)
- 1-byte bit pattern: 11110010 (Page 2)

Frame format (II/II)

- Frame format (i.e. L2 frame payload)
 - Encapsulated SCHC compressed packet:

- SCHC Packet:
 - A packet with a header compressed by using SCHC
- Padding:
 - To align to an octet boundary

SCHC compression for IPv6, UDP, and CoAP headers

- SCHC header compression may be applied to different protocols or sets of protocols. E.g.:
 - IPv6, IPv6/UDP, IPv6/UDP/CoAP
 - TO-DO: Rule ID (base compressed header) details
- IPv6 and UDP header fields **MUST** be compressed as per section 10 of RFC 8724
 - TO-DO: adapt DevIID and ApplID for IEEE 802.15.4
- CoAP header fields **MUST** be compressed as per sections 4 to 6 of RFC 8824

Thanks!

Annex

- Maximum lifetime improvement factor
 - Short MAC addresses, intra-PAN
 - E.g. a battery-operated sensor that periodically sends a message over IEEE 802.15.4
- Star topology**

NOTE: actual improvement will be lower
