

# URI Signing

## The never ending story

- Was in Last Call in February
- Had some feedback from mnot
  - Concerned about how we specified things in the URI
- Had lots of feedback from IESG
  - Client IP\*\*\*\* (usefulness and privacy)
  - Shared keys (security)
  - Why are some things SHOULD and not MUST? When can implementers ignore SHOULD?
  - Advice to designated experts
- Chris Lemmons
  - Loose specification around path-style and query-style parameters
