

# Security Workshop

- Proposal: GNAP Workshop with a call for papers inviting researchers to perform security protocol proofing
- Timeframe if agreed: 2-day workshop, 4 hours per day in about 6 months?
- Remote to include participants more broadly, not knowing the state of vaccines for the next year

# Next Steps

- Suggestion: separate progress for Core vs. RS draft, focus now on Core
- Complete Security, Privacy sections
- Complete IANA section
- Review use cases on the wiki, inventory covered and non-covered use cases
  - Possibly extend Appendix D with additional use cases
- Stabilize doc, as measured by <10 open issues
- WGLC
- Formal security review while doc in “feature freeze”
- Stabilize again and if necessary, repeat LC
- Publish

# Questions

- Can we really progress the drafts separately?
- Any remaining major technical holes?
- Broader reviews, e.g., from the OpenID community
- Broader review and engagement with OpenID and the larger OAuth community, in the context of OAuth protocol evolution
