

JSContact Status

IETF 111

- Latest versions
 - <https://www.ietf.org/archive/id/draft-ietf-jmap-jscontact-07.html>
 - <https://datatracker.ietf.org/doc/html/draft-ietf-jmap-jscontact-vcard-06>
- Incorporates feedback from IETF 110 and CalConnect/IETF Interim

Discussion items

- localizations property rather than LocalizedString (wait one more week)
- @type property
- Field-level metadata:
 - Track metadata per property, e.g. updated UTC timestamp.
 - Could use `fieldMetadata: String[Metadata]`, where key is a path to the field
- Multi-sourced contact:
 - Show unified view for contact source from multiple sources
 - Need that in data format? Or keep it to implementation?
