PIM WG, IETF 111
Current Logistics

- Design team focused on developing -00 versions of RFCs 3376 & 3810
  - Assess and incorporate valid errata
  - Identify other potential changes

- Initial versions published with valid errata

- Tracking issues related to advancement in GitHub
  - https://github.com/ietf-wg-pim/igmp-mld-bis/issues?q=is%3Aissue+
Representative Issue

- **Erratum against the definition of Older Version Querier Present timeout**
  - Referenced variables not available to listening hosts
  - Three sampled implementations do not use the formula originally defined
- **Updated definition text to:**
  - Reference values available to hosts and aligned with information found in older query messages
  - Provided justification for the definition
  - Align definition with what is implemented and used in operation
- **To Do:** carry definition over from 3376bis to 3810bis for consistency
Next Steps

- Work through remaining issues documented on GitHub
  - Other issues to be considered?
- Discuss with WG and AD the status of older versions of IGMP and MLD
  - Move to Historic with publication of these drafts?
- WG Adoption?
- Questions? Comments?
