Versions since IETF 110

- **-00**

  - Initial WG version

- **-01**

  - Compliance with draft-ietf-jmap-jscontact-05

  - Recommended some map keys to be used in an RDAP response

- **-02**

  - Compliance with draft-ietf-jmap-jscontact-06

Recommended JSContact map keys in RDAP

- RDAP providers are RECOMMENDED to use some RFC5733 labels as map keys :

  - "**org**" for the internationalized organization in the "organizations" map;

  - "**int**" for the internationalized postal address in the "addresses" map;

  - "**loc**" for the localized postal address in the "addresses" map;

  - "**email**" for the email address in the "emails" map;

  - "**voice**" for the voice number in the "phones" map;

  - "**fax**" for the fax number in the "phones" map.

# **Recent updates about jscontact-tools**

- An open-source Java library for JSContact creation, validation, serialization/deserialization and conversion from and to vCard/xCard/jCard

  - Last version is 0.5.0

  - Compliant with: draft-ietf-jmap-jscontact-07, draft-ietf-jmap-jscontact-vcard-06, draft-ietf-regext-rdap-jscontact-02

  - **https://github.com/consiglionazionaledellericerche/jscontact-tools**

Next steps

- JSContact spec is close to being submitted to IESG

  - Last open issue is about how to handle localizations

- Other implementations in addition to .it:

  - CentralNic (done, live soon)

  - Other registries are hopefully expected to implement the draft (feedback from ROW2021)

Thanks for the attention!
