

# draft-ietf-dnssd-srp

Ted Lemon <[elemo@apple.com](mailto:elemo@apple.com)>

Stuart Cheshire <[cheshire@apple.com](mailto:cheshire@apple.com)>

# Current Status

- Mostly ready to go, except...
  - Some comments from Esko, nothing controversial
  - The Sleep Proxy Question

# Sleep Proxy status

- Removed from the -11 version of the document
- Did not consult working group before doing this
- Need working group to decide whether this is okay, or whether we should finish the Sleep Proxy section of the document before shipping SRP as a whole

# Arguments for removing Sleep Proxy

- Sleep Proxy specification in SRP isn't really ready to publish, we'd have to hold up SRP
- Arguably it's documenting something different anyway, although obviously related
- Could easily be documented as an SRP enhancement in draft-cheshire-edns0-owner-option
- Separating Sleep Proxy fate from SRP fate splits work into smaller chunks, which are easier to digest
- Changing DNSSD capabilities mean that the EDNS0 owner option maybe should be considered separately from the proxy question anyway

# Arguments against:

- draft-cheshire-edns0-owner-option is long expired
- It's not clear there's energy to do this work
- Riding on the coat-tails of SRP would probably force us to finish Sleep Proxy sooner

# What does the WG think?

- Anyone? Anyone? Bueller?
