

# draft-ietf-jmap-jscontact & draft-ietf-jmap-jscontact-vcard

Current scope fully covered.

- Out of scope: field metadata and versioning.
- All properties map between VCARD and JSContact, except for a few deliberate gaps.
- More implementation experience required before last call.

# Naming revisited: Unicode Public Review Issue 434

CLDR Person Name Formatting <https://www.unicode.org/review/pri434/>

- Names consist of fields (surname, middle, ...).
- Name patterns allow to define how to format these fields for various use cases (addressing, referring, sorting, formal, informal, ...)

Impact on JSContact:

- Align NameComponent type with PRI434
- Sorting and formatting out of scope

# Align NameComponent type with PRI434

<b>JSContact</b>	<b>PRI434</b>	<b>Add/Change JSContact</b>
prefix	prefix	
personal	given	given
surname	surname	
	surname2	surnameN (N>=2)
additional	middle	middle
suffix	suffix	
separator
