APN Flowspec

- Flowspec component - APN ID
  - Encoding: <type (1 octet) = TBD, length (1 octet), mask (variable), APN ID (variable)>

- Example
  - The APN ID in the packet contains two parts, i.e. APP Group ID (0x300A) and User Group ID (0x0C08).
  - In the Flow Spec, the mask is 0xFFFFFFFF and the APN ID is 0x300A0000.
  - Processing the match of the APN ID component is done by using the mask (0xFFFFFFFF) to indicate the bits of the APN ID carried in the packet to be matched against the one carried in the Flow Spec (0x300A0000). The result of this example is a successful match.

</table>

- The entire APN ID
- The partial APN ID
- Inherit the APN ID
- Stitch the APN ID
APN Flowspec

• The ordering of FS is important for APN
  • There are other co-existing Flow Spec rules rather than only APN Flow Spec rules.
  • The different parts of the APN ID can be determined by the different Flow Spec rules.

• Usage Principles
  • Within a sub-group, the order is the same as the previously defined.
    ✓ If the traffic-action Extended Community is carried and the Terminal Action (T, bit 47) is not set, when one condition in this sub-group is matched, the evaluation of any subsequent flow specifications within this sub-group stops; if T is set, then the evaluation continues;
    ✓ If T is not carried, when one condition in this sub-group is matched, the evaluation of any subsequent flow specifications within this sub-group stops;
  • Between sub-groups
    ✓ The sub-group is ordered with Sub-group ID, when the evaluation in one sub-group stops or finishes, it will start the evaluation in the following sub-group if there is any sub-group left.
  • Between groups
    ✓ The group is ordered with Group ID, if at least one condition in this group is matched, when the evaluation of the flow specifications within the group reaches the end, the evaluation stops and the evaluation of the following group(s) will not start.
APN YANG Model

- APN ID Templates
- APN ID Marking
- APN Mapping Policies

IPv6 data plane

Define the templates of the structured APN ID

Fill in the template to set the APN ID

Map into tunnel/policies against the set APN ID

Inherit APN ID
