# draft-ietf-tsvwg-udp-options-dplpmtud

- DPLPMTUD for UDP Options
  - Confirmation of Connectivity across a Path
  - Sending UDP-Options Probe Packets
  - Validating the Path with UDP Options
  - PTB Message Handling for this Method
- Intended as a template for other drafts that need to describe how to support DPLPMTUD
- 7 pages + appendices ( mostly same as individual ID -03)

# Next Steps

- Correct text on creating padding for probes
- Editorial pass to fix typos and align terminology with current UDP Options
- Para to explain how DPLPMTUD works with fragments
- Address other WG comments
- We expect this will complete with UDP Options
