

# Pros and Cons of IPv6 Transition Technologies for IPv4aaS

draft-ietf-v6ops-transition-comparison

**Gábor LENCSE** [lencse@hit.bme.hu](mailto:lencse@hit.bme.hu) (BUTE) – presenter

**Jordi PALET MARTINEZ** [jordi.palet@theipv6company.com](mailto:jordi.palet@theipv6company.com) (The IPv6 Company)

**Lee HOWARD** [lee@asgard.org](mailto:lee@asgard.org) (Retevia)

**Richard PATTERSON** [richard.patterson@sky.uk](mailto:richard.patterson@sky.uk) (Sky UK)

**Ian FARRER** [ian.farrer@telekom.de](mailto:ian.farrer@telekom.de) (Deutsche Telekom AG)

IETF 112, v6ops, November 11, 2021.

# Our draft is ready for WGLC

- Incomplete parts were removed and put into two new drafts:
  - The issue of the scalability of the stateful technologies (Section 4.2)
    - Lencse, G., "Scalability of IPv6 Transition Technologies for IPv4aaS",
      - <https://datatracker.ietf.org/doc/html/draft-lencse-v6ops-transition-scalability-00>
      - It has real content: scalability results of iptables (sample for NAT64 scalability tests)
  - Benchmarking of all five IPv4aaS technologies (Section 5)
    - Lencse, G., "Performance Analysis of IPv6 Transition Technologies for IPv4aaS",
      - <https://datatracker.ietf.org/doc/html/draft-lencse-v6ops-transition-benchmarking-00>
      - Only a placeholder, results will be added later
- This draft should be published ASAP to assist operators with a stable document! 😊
