VSTATUS

- Need to redo status work using new component rather than GROUP param
- Latest version (02) shows the spec for a VSTATUS component
- Will redo sections 10.1, 10.2, 10.3
- 11.1 (GROUP) can go

11.2: REASON

- Used to indicate the reason for change in status or participation
- If we make use of PARTICIPANT and VSTATUS this should be a property not a parameter.
- Does SUMMARY mean the same? Maybe REASON shows intent better

11.3: MODIFIED

- Indicate time of change in status or participation
- If we make use of PARTICIPANT and VSTATUS this should be DTSTAMP

11.4: SUB-STATE

- With VSTATUS this can be a new property

14.1: Attendee changes

- If we use PARTICIPANT these all become properties so this goes

14.2: COMMENT changes

- Related to 10.3 allowing multiple comments per status with reason and modified.
- Same effect by having multiple VSTATUS with same status value and different comments, reason and dtstamp.
- Can probably drop this section

14.3: STATUS changes

- With VSTATUS can drop this section

15: VSTATUS

- A quick first pass.
- Update to use REASON property

Summary

- Introducing VSTATUS and using PARTICIPANT greatly simplifies the spec.
- Should this be the first to include a jscalendar mapping?
