Relations and subscription upgrade
Vienna
March 22/22
Relations - 6.1 linkrel

• Has the text

In addition to the value defined here any link relation in the link registry established by [RFC8288], or new link relations, may be used.

• Uneasy at not requiring an RFC - how else do we know how to use the link?

• Did take out some text along those lines.

• Benjamin suggested something like

It is expected that link relation types seeing significant usage in calendaring will have the calendaring usage described in an RFC
Subscription upgrade

• I feel this is ready.

• Noticed it is referring to RFC5988 but should be RFC8288

• Also the privacy section got tagged on to the security section
