Relations and subscription upgrade

Vienna

March 22/22

Relations - 6.1 linkrel

- Has the text

  In addition to the value defined here any link relation in the link registry established by [RFC8288], or new link relations, may be used.

- Uneasy at not requiring an RFC - how else do we know how to use the link?

- Did take out some text along those lines.

- Benjamin suggested something like

  It is expected that link relation types seeing significant usage in calendaring will have the calendaring usage described in an RFC

Subscription upgrade

- I feel this is ready.

- Noticed it is referring to RFC5988 but should be RFC8288

- Also the privacy section got tagged on to the security section
