UPDATES AND "OOPS"

‣ Multiple client / server implementations, seems good to go!

‣ Two open issues:

   ‣ Disallow auth via **only** client cert in TTLS / PEAP?

   ‣ For TTLS + PAP, clients **must** accept:

      ‣ EAP Success, EAP Failure, another round with a session ticket

‣ Minor updates / implementation notes, and then submit to RFC editor
