MIAD Framework

draft-andersson-mpls-miad-fwk-01

Loa Andersson

Matthew Bocci

Stewart Bryant

IETF Framework and Architecture documents

- Framework, document with a focus on how "an enity" interworks with its environment.

- Architecture, a document with focus on how "an entity" works internally

- Sometimes we talk about architectural frameworks

  – To the best of my understanding this is the best of two worlds

draft-andersson-mpls-miad-fwk-01

- Matthew, Stewart and Loa, put this document together.

- The comments were mostly positive

- The work were a race to meet dead lines

- Then we got a xmas-present

draft-andersson-mpls-miad-fwk

- John, Tony and Adrian had been thinking along the same lines as we had
  - They sent us a lot of useful text that will be incorporated in the draft
- On a high technical level we are mostly in aggrement
  - Which is good, since that is what a framework is about
  - On details, such as what we'll call "things" and what abbreviations to use there is a some distance to go

Tony Li
John Drake
Adrian Farrel

Next steps

- Tony will take over holding the pen

- We'll post a new version after the IETF week.

- That version need considerable review by the Open DT and the working groups

- After updates we should have a version that is ready for wgap
