

# **Recommendations for DNSSEC Resolvers Operators**

**York, Migault**

# Goals:

Describe operational recommendations to implement sufficient trust that makes DNSSEC validation output accurate.

Intend to address most recurrent questions received by potential DRO

The recommendations described in this document include,

- provisioning mechanisms
- monitoring mechanisms
- management mechanisms

The recommendations are classified as:

- Start-up recommendations
- Run time recommendations
- On demand recommendations

and related to the following topics:

- Time deviation
- Trust Anchor
- Negative Trust Anchor
- ZKS / KSK ( non TA)
- Crypto deprecation
- Invalid Reporting

As far as I can tell we addressed all comments receives so far:

<https://github.com/mglt/draft-mglt-dnsop-dnssec-validator-requirements/issues>

- most of them were clarification

We also refreshed the document to make it clearer overall.

We believe the document is closed to be ready and welcome additional comments

Thanks!
