

Prague lab testing

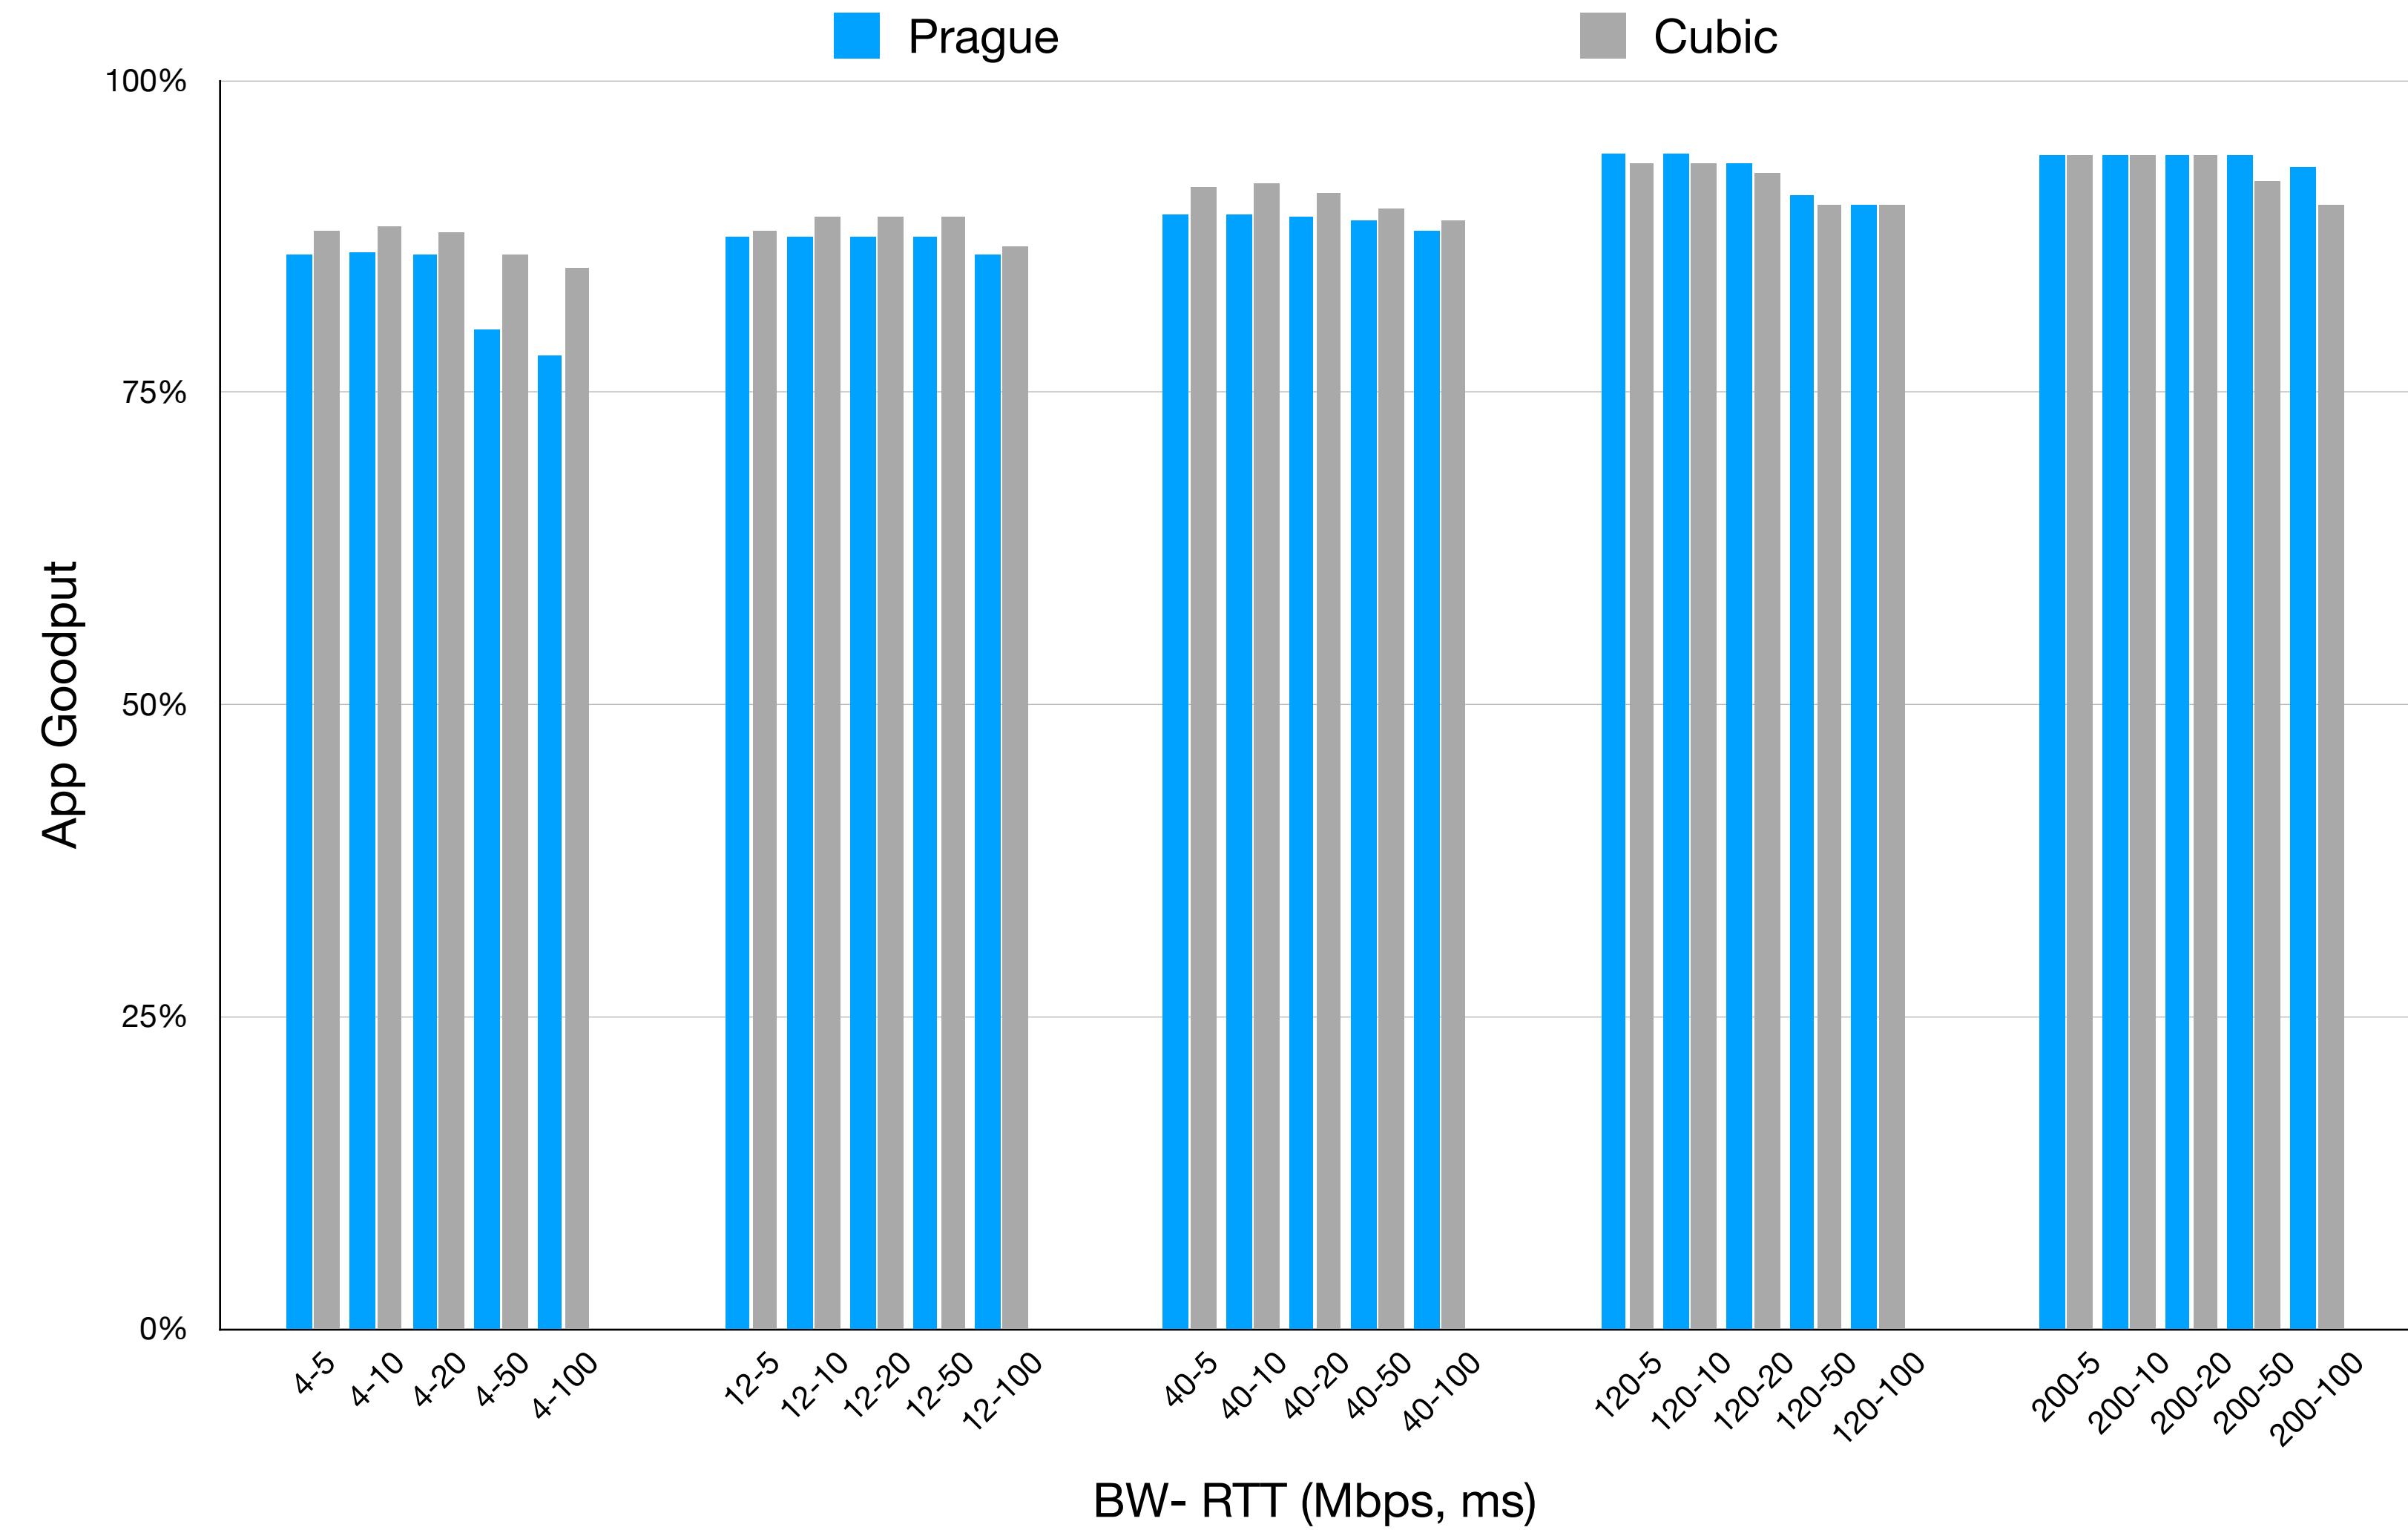

ICCRG, IETF 114
Vidhi Goel

Upstream over Ethernet

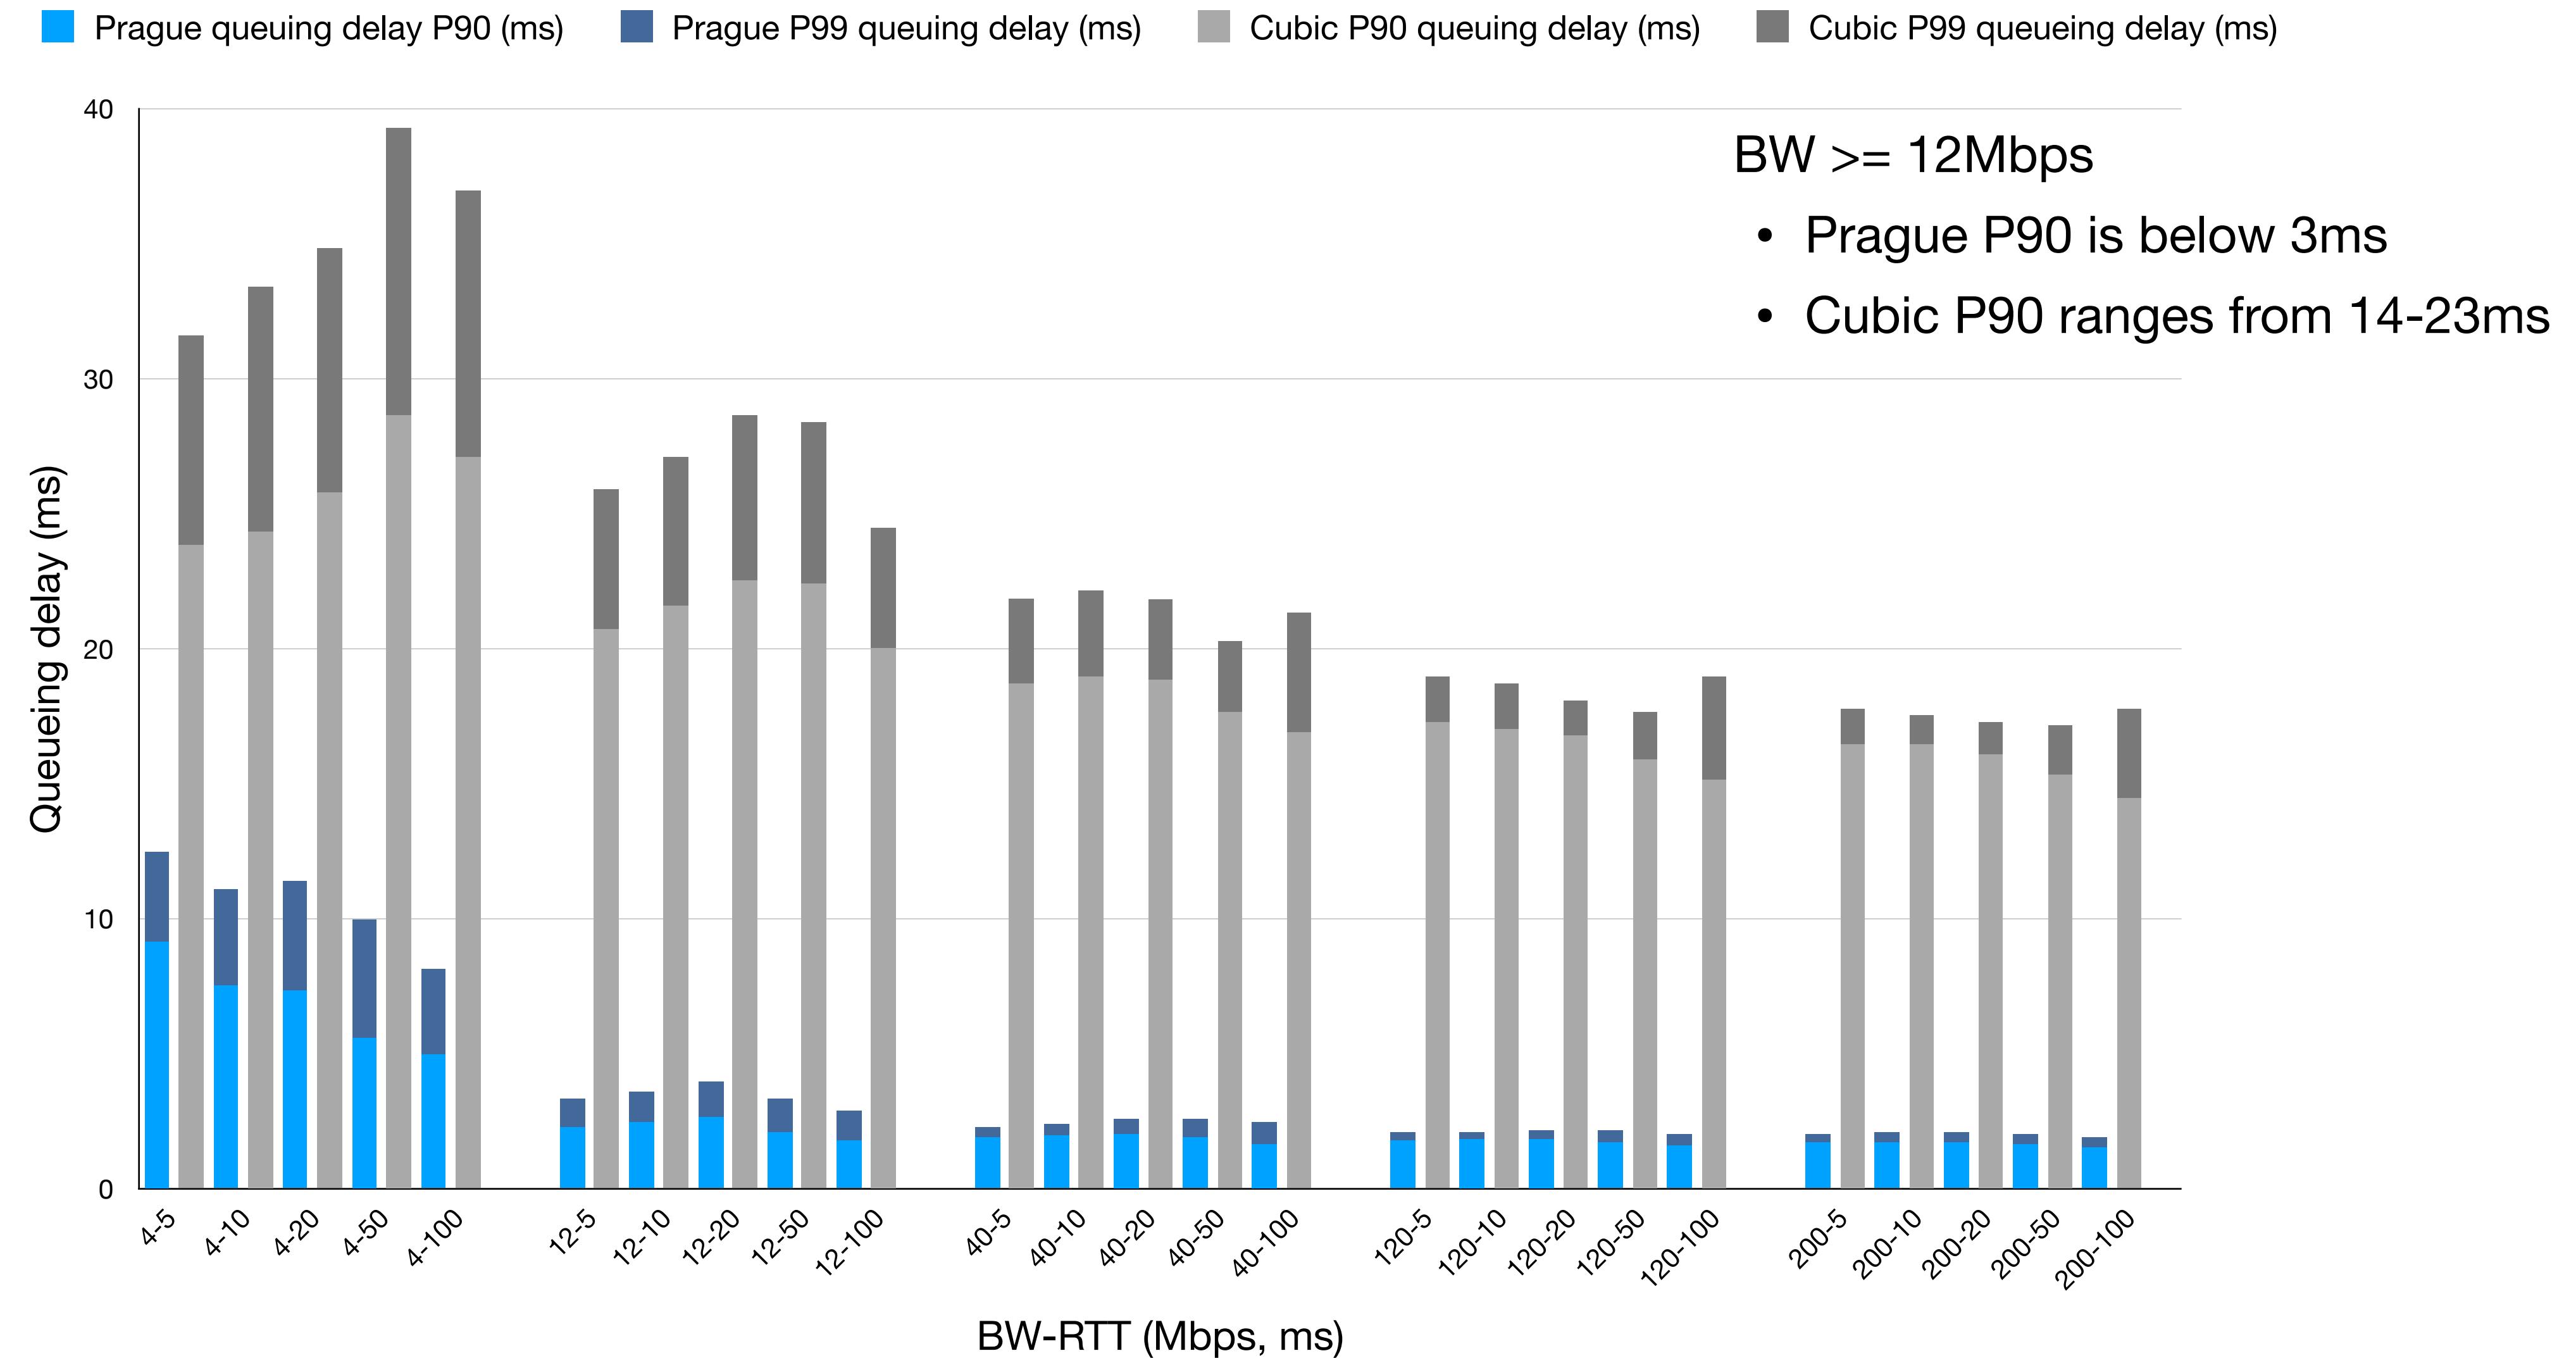

Standalone flow

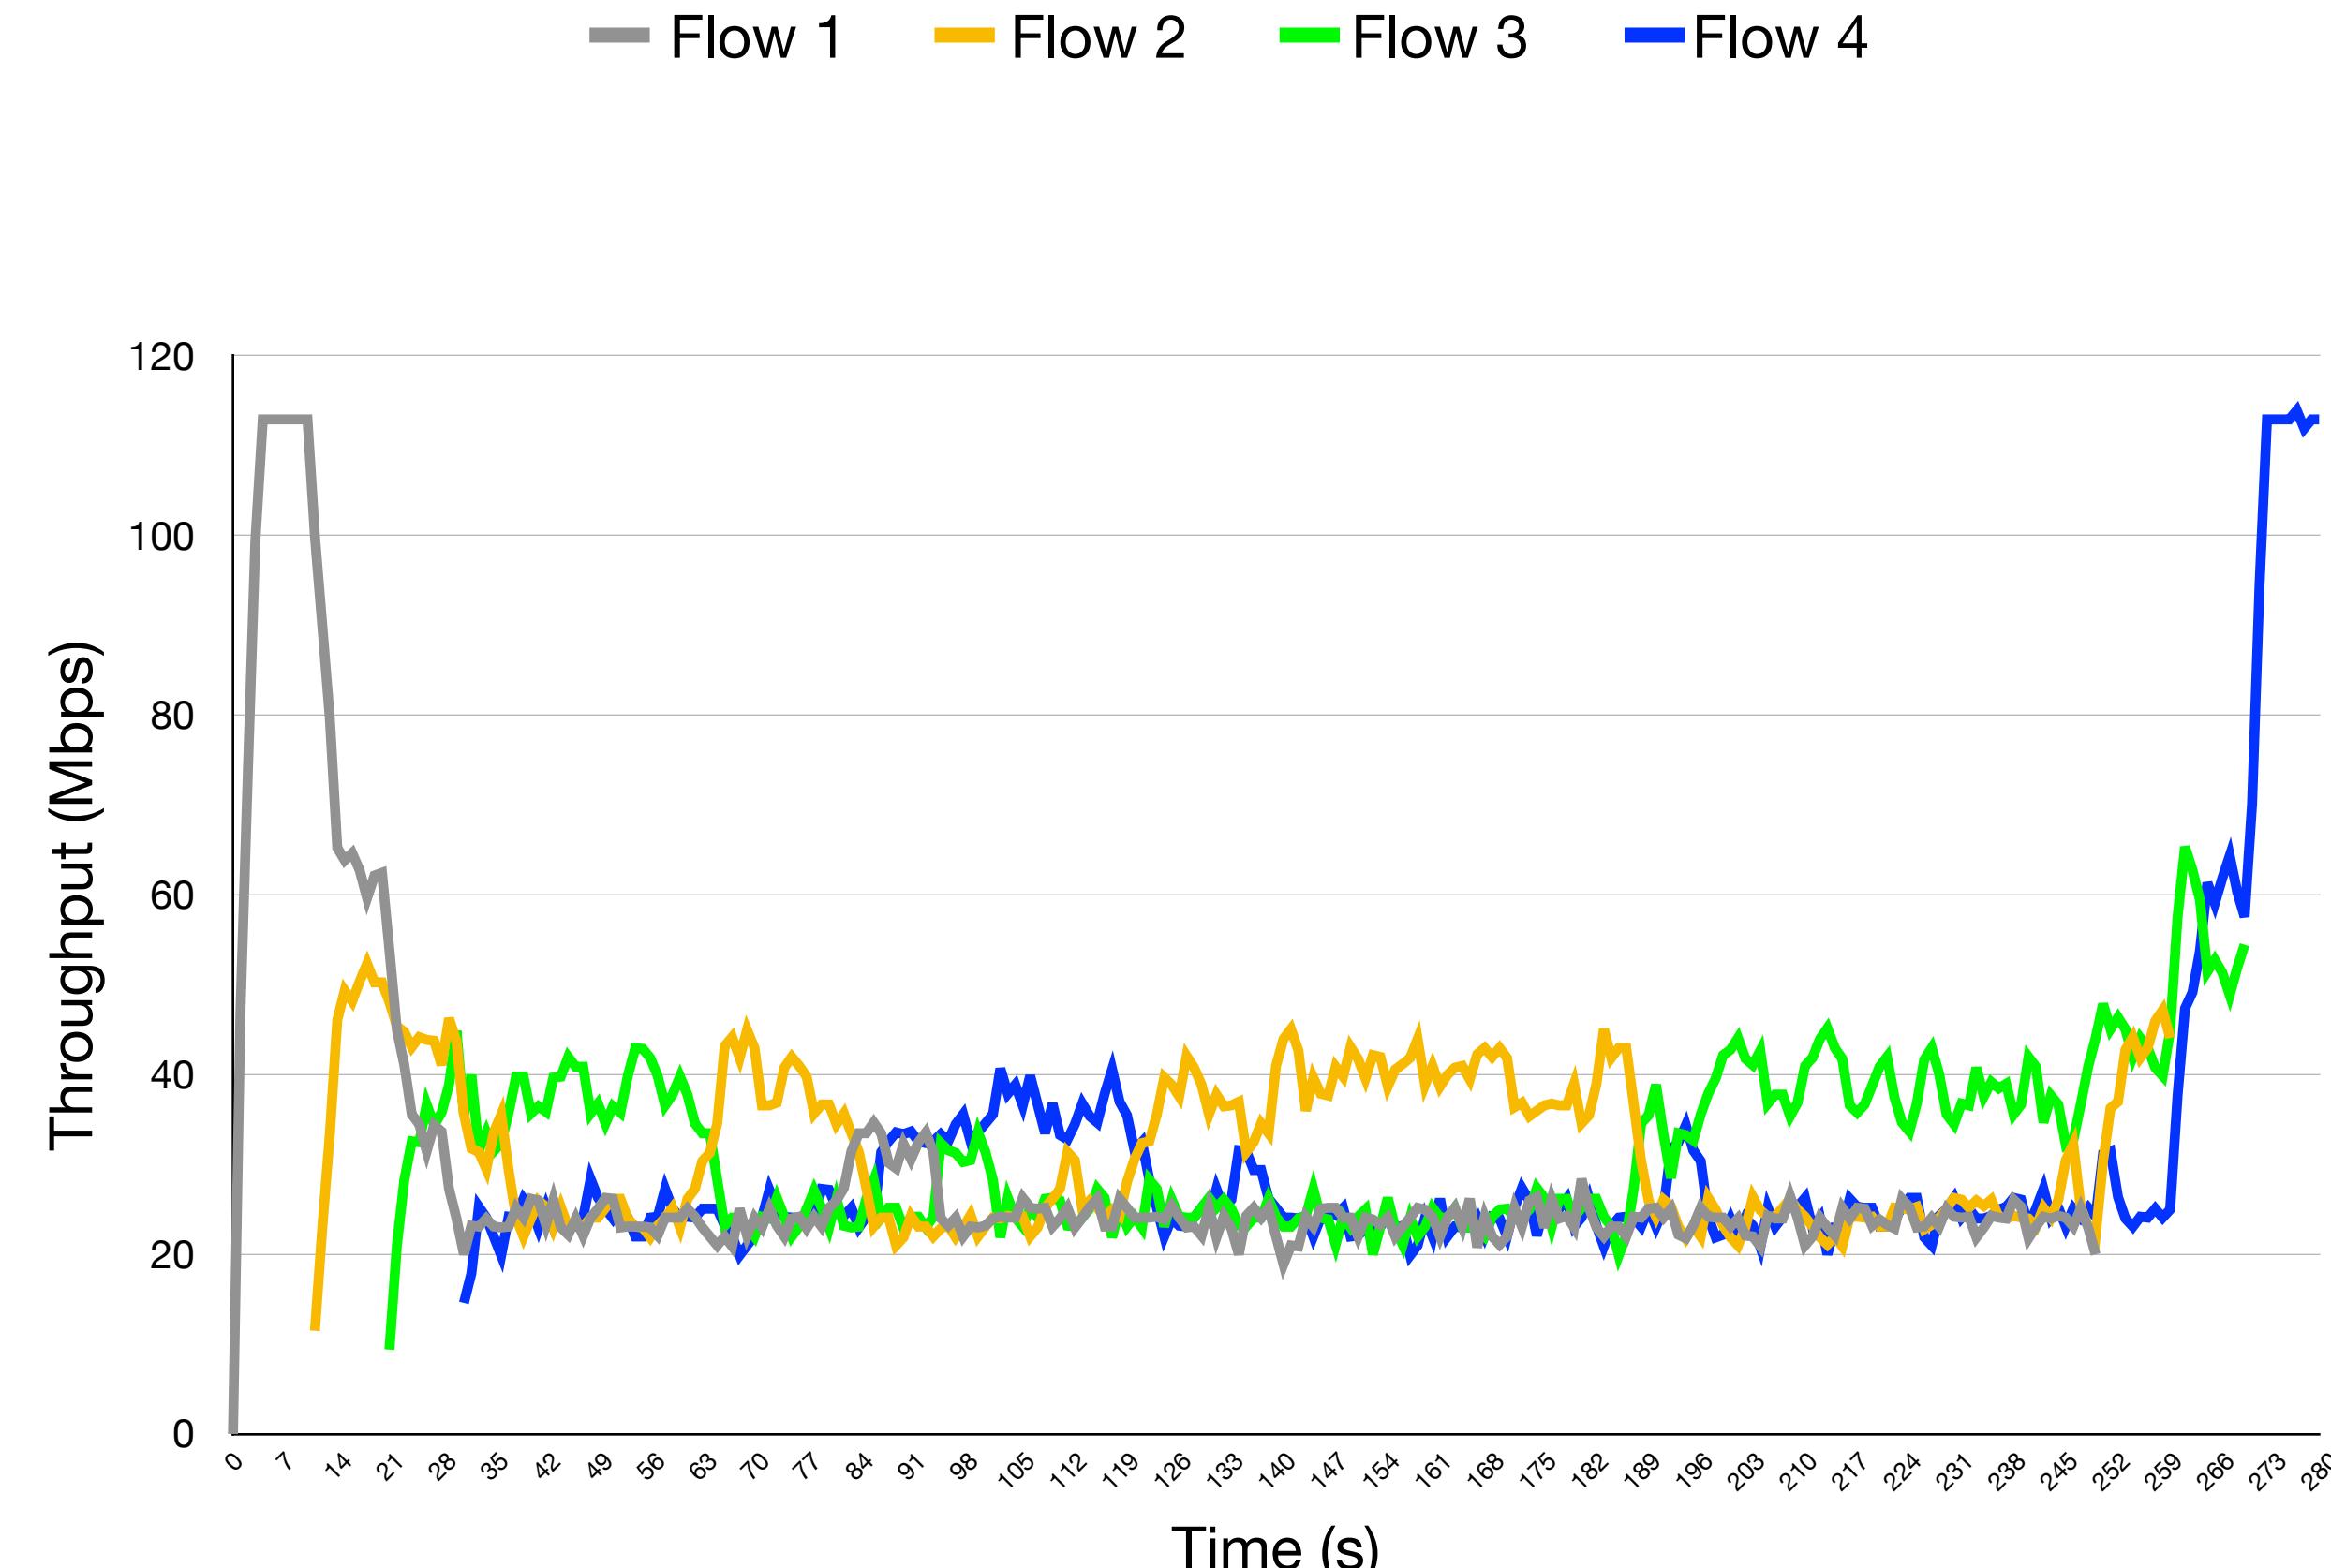

Standalone flow

Single flow against a competing flow

Multiple staggered flows

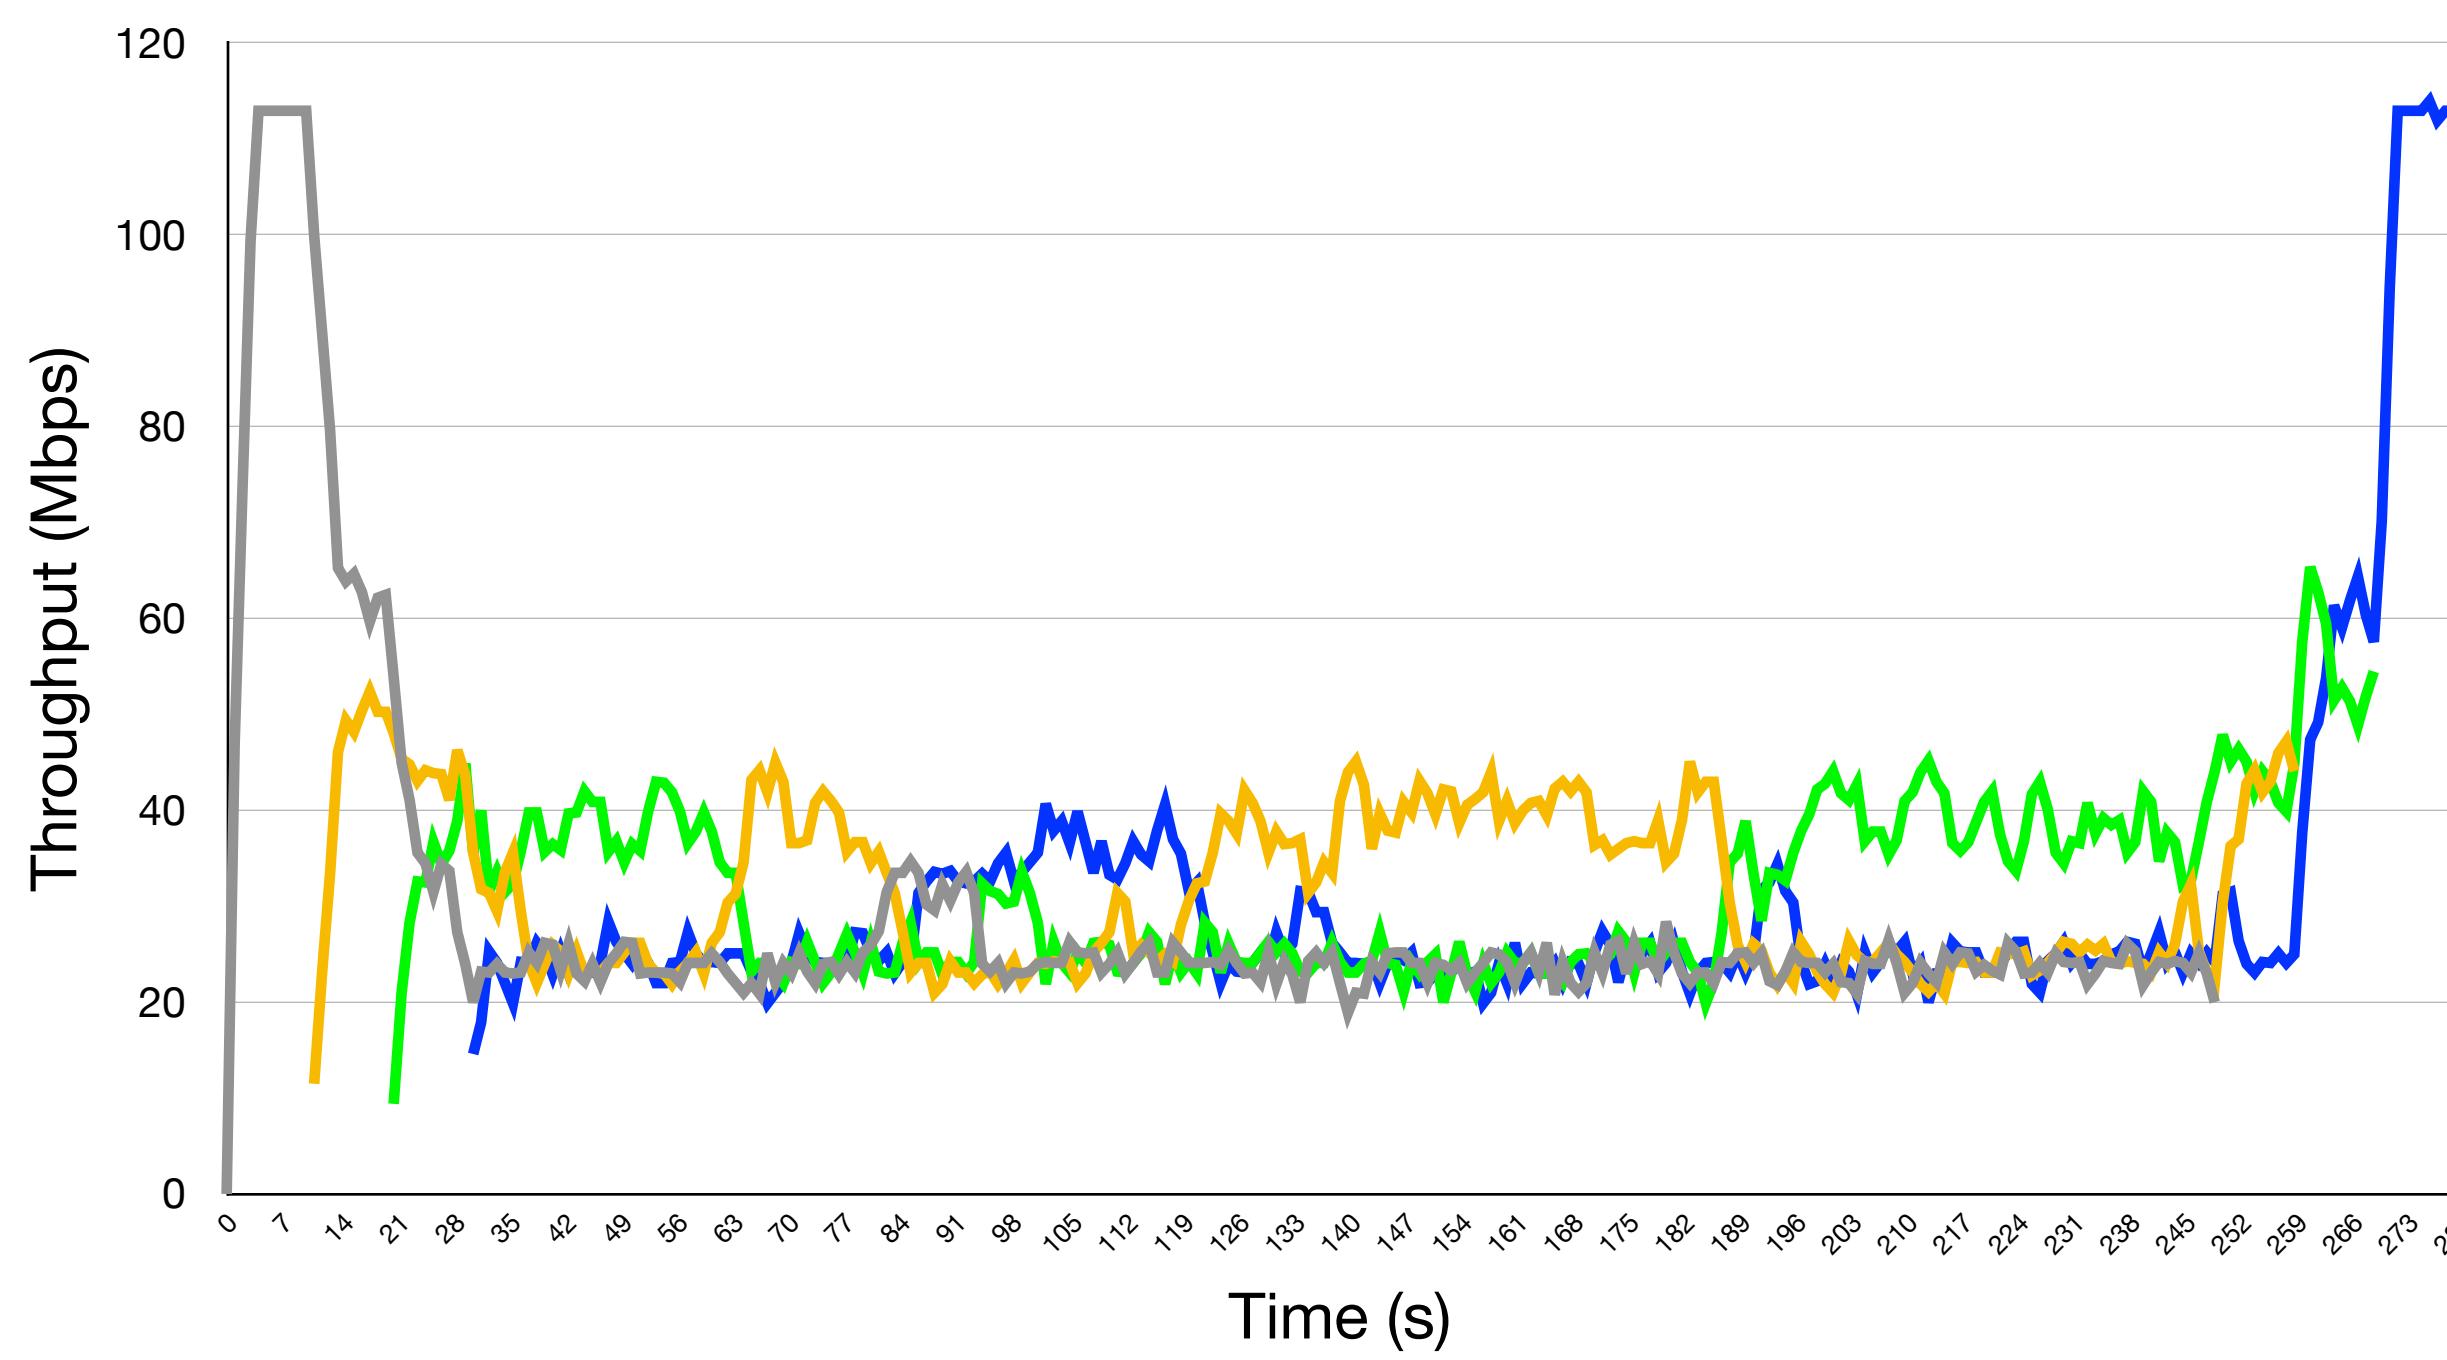

Prague

120 Mbps, 20ms RTT

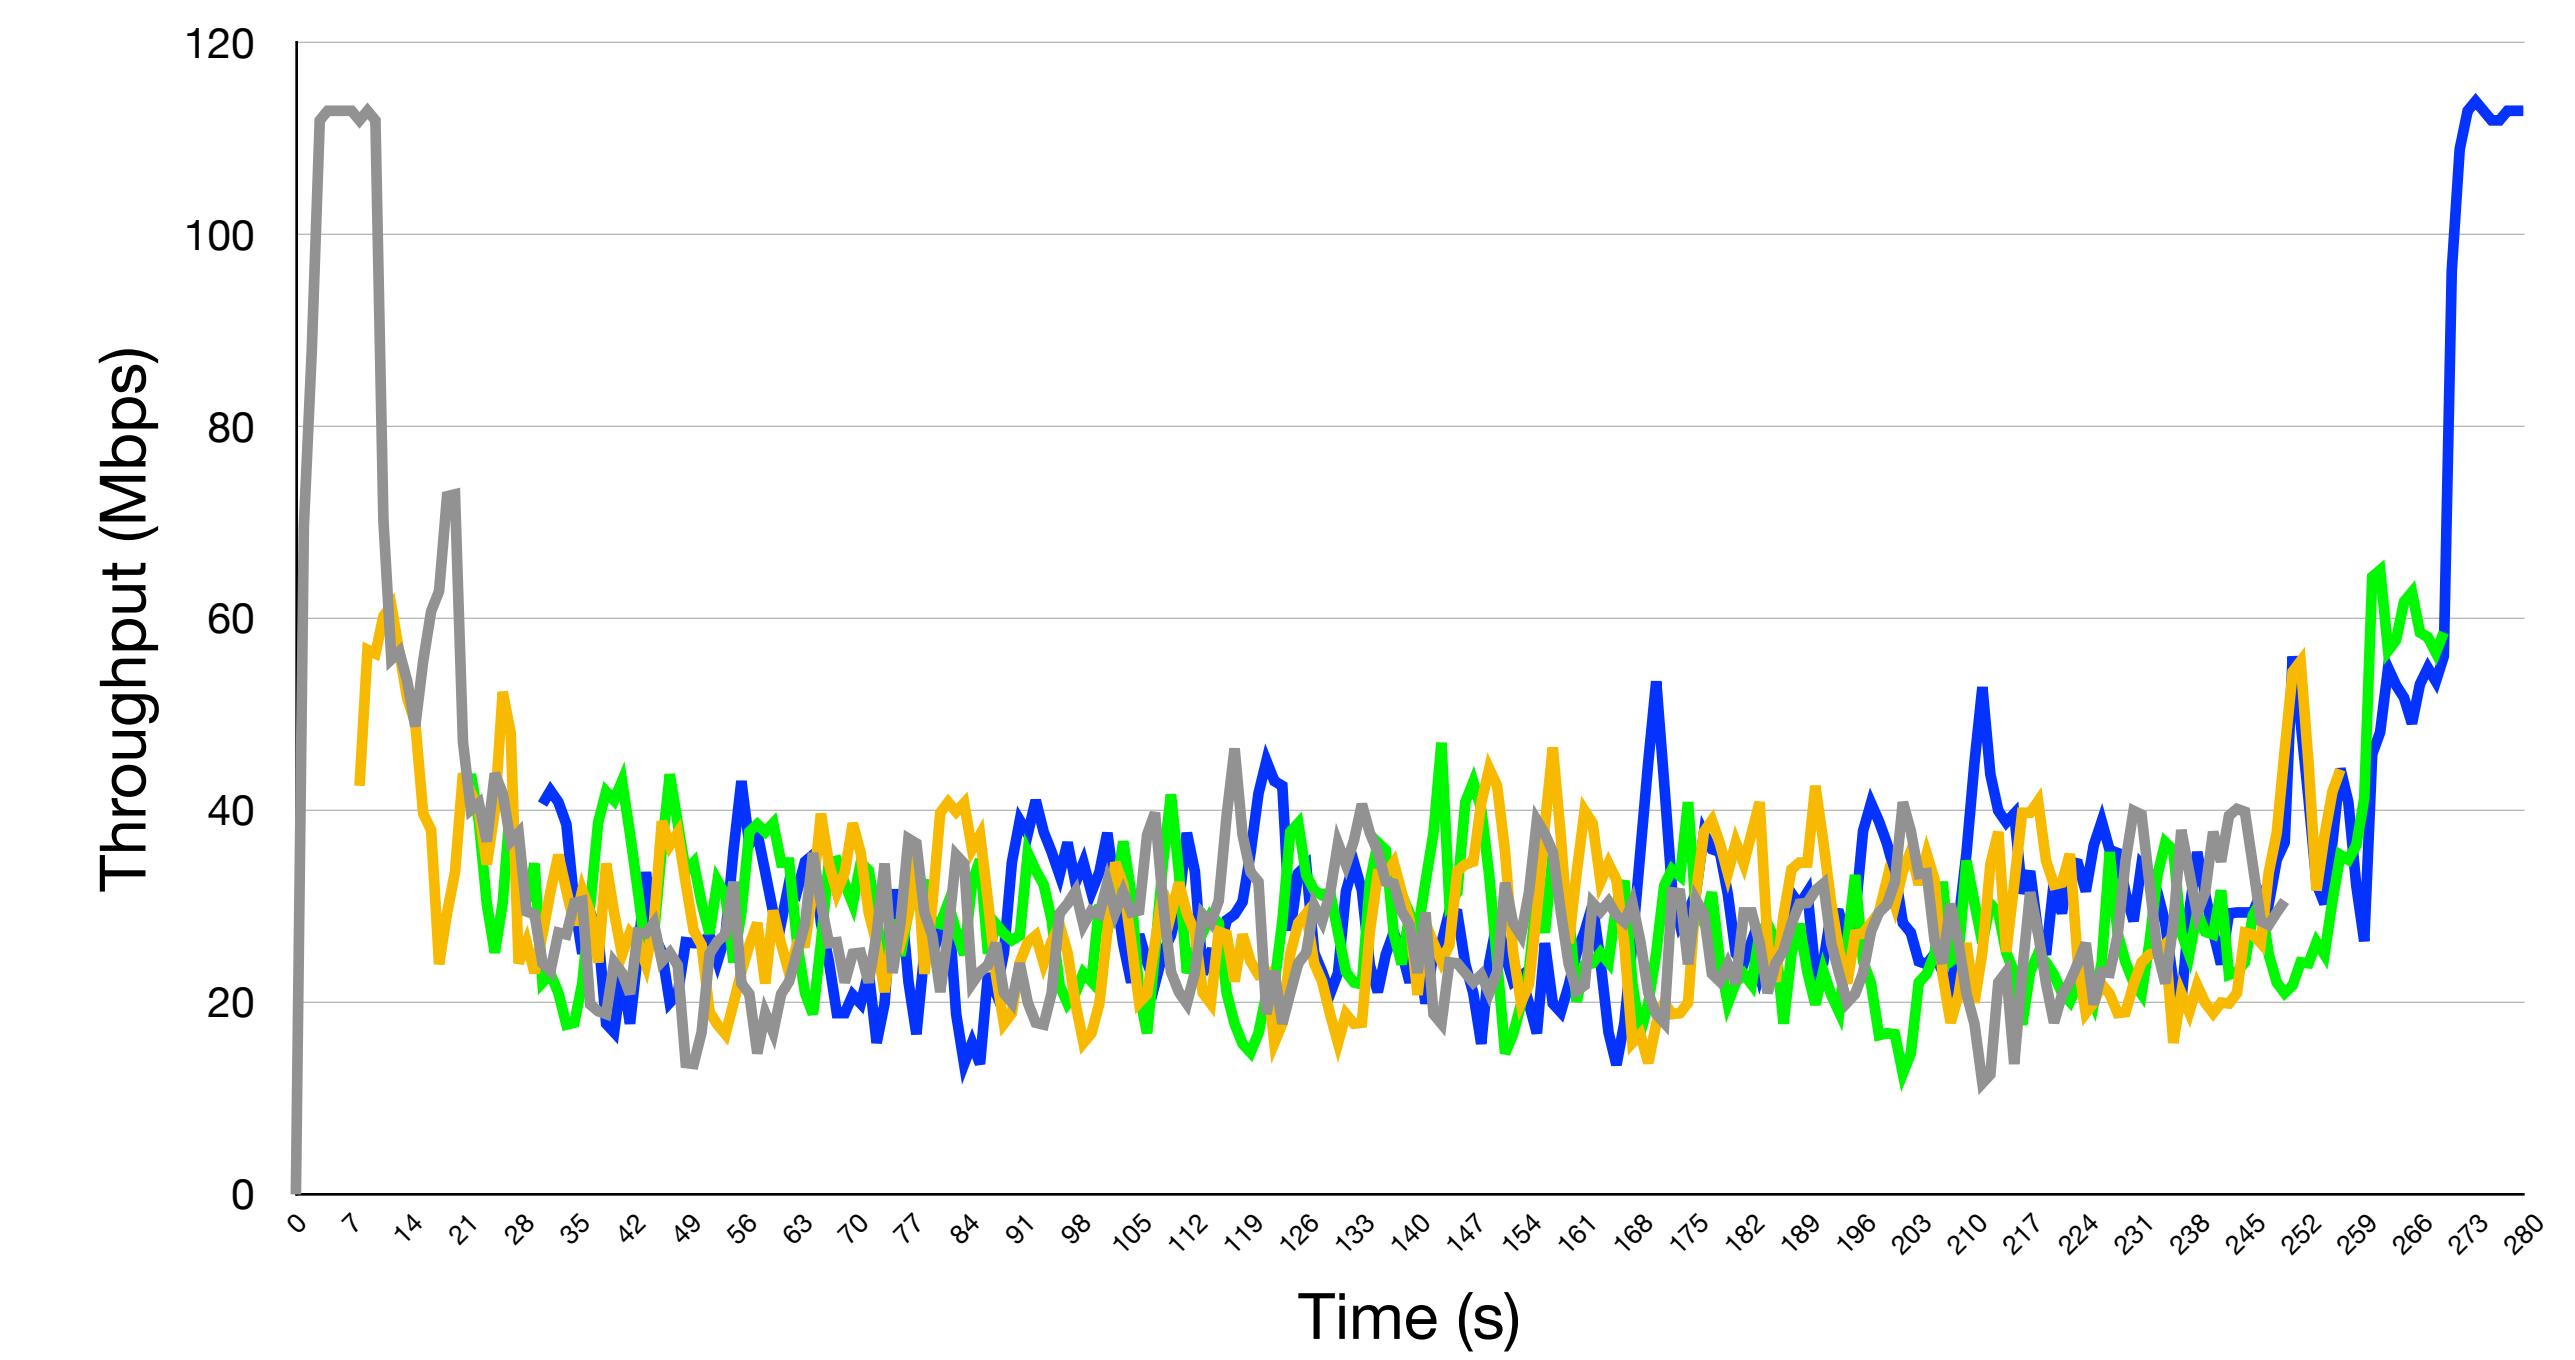

Multiple staggered flows

— Flow 1 — Flow 2 — Flow 3 — Flow 4

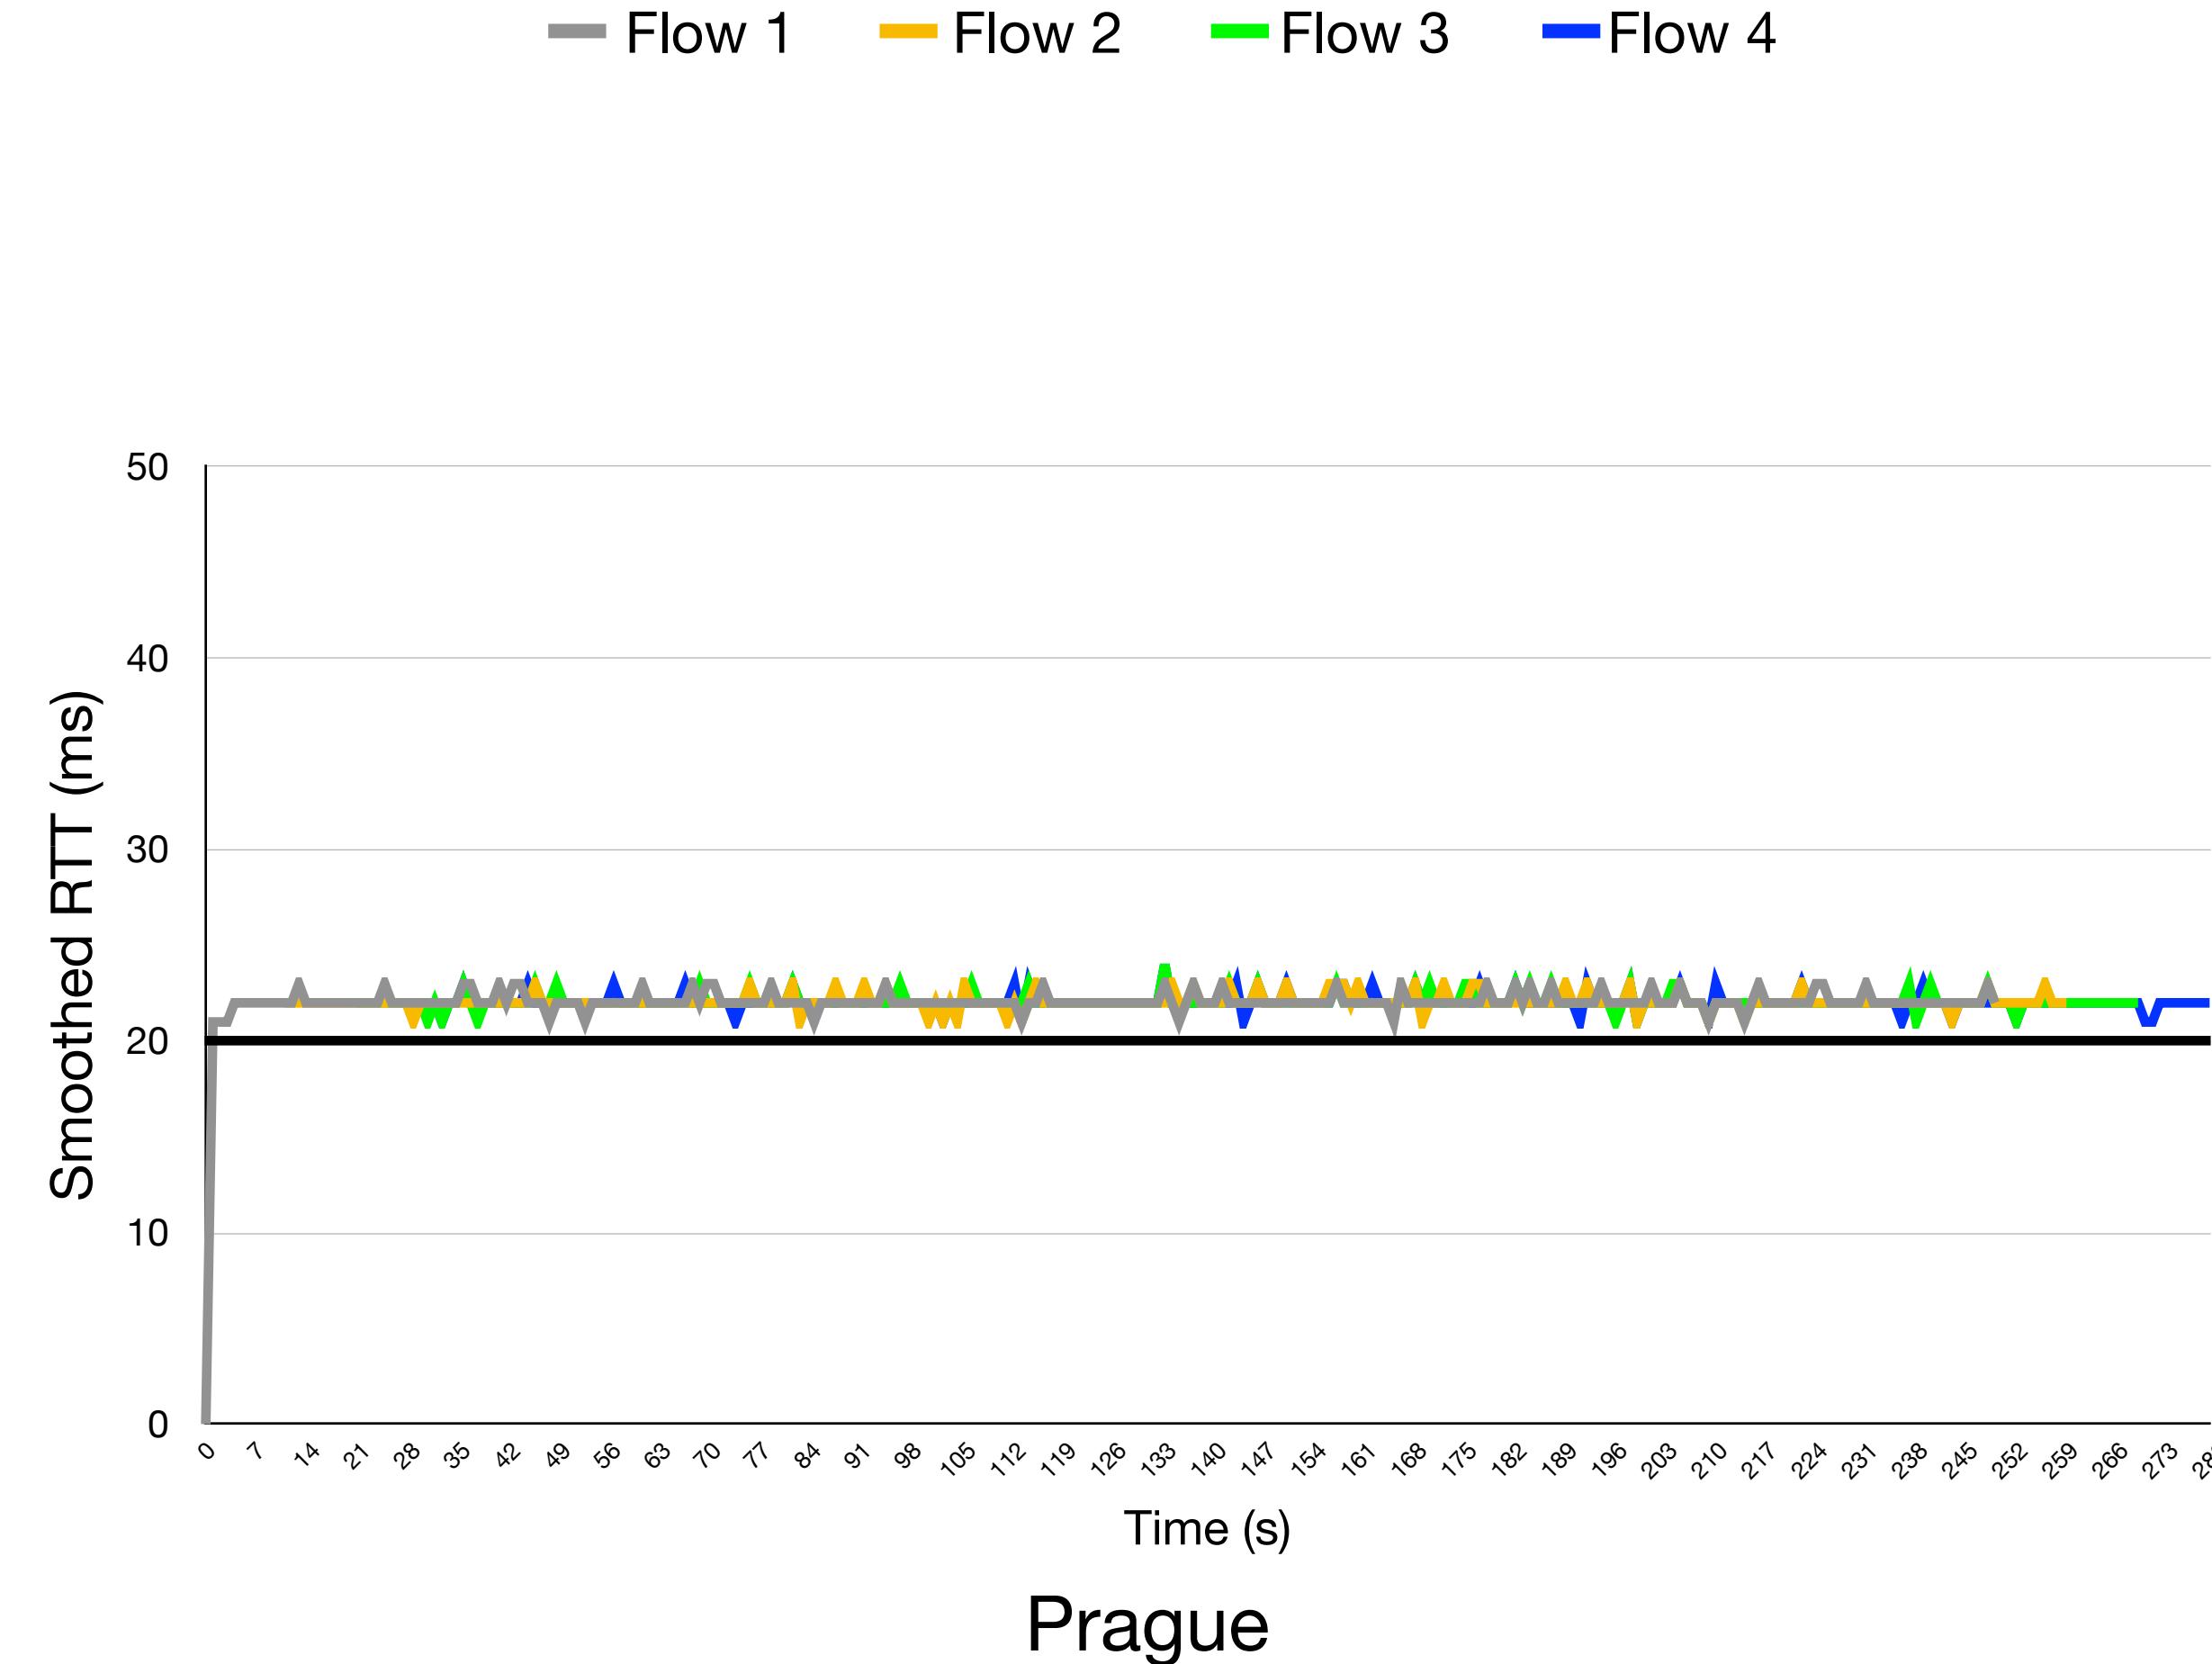

Prague

120 Mbps, 20ms RTT

Cubic

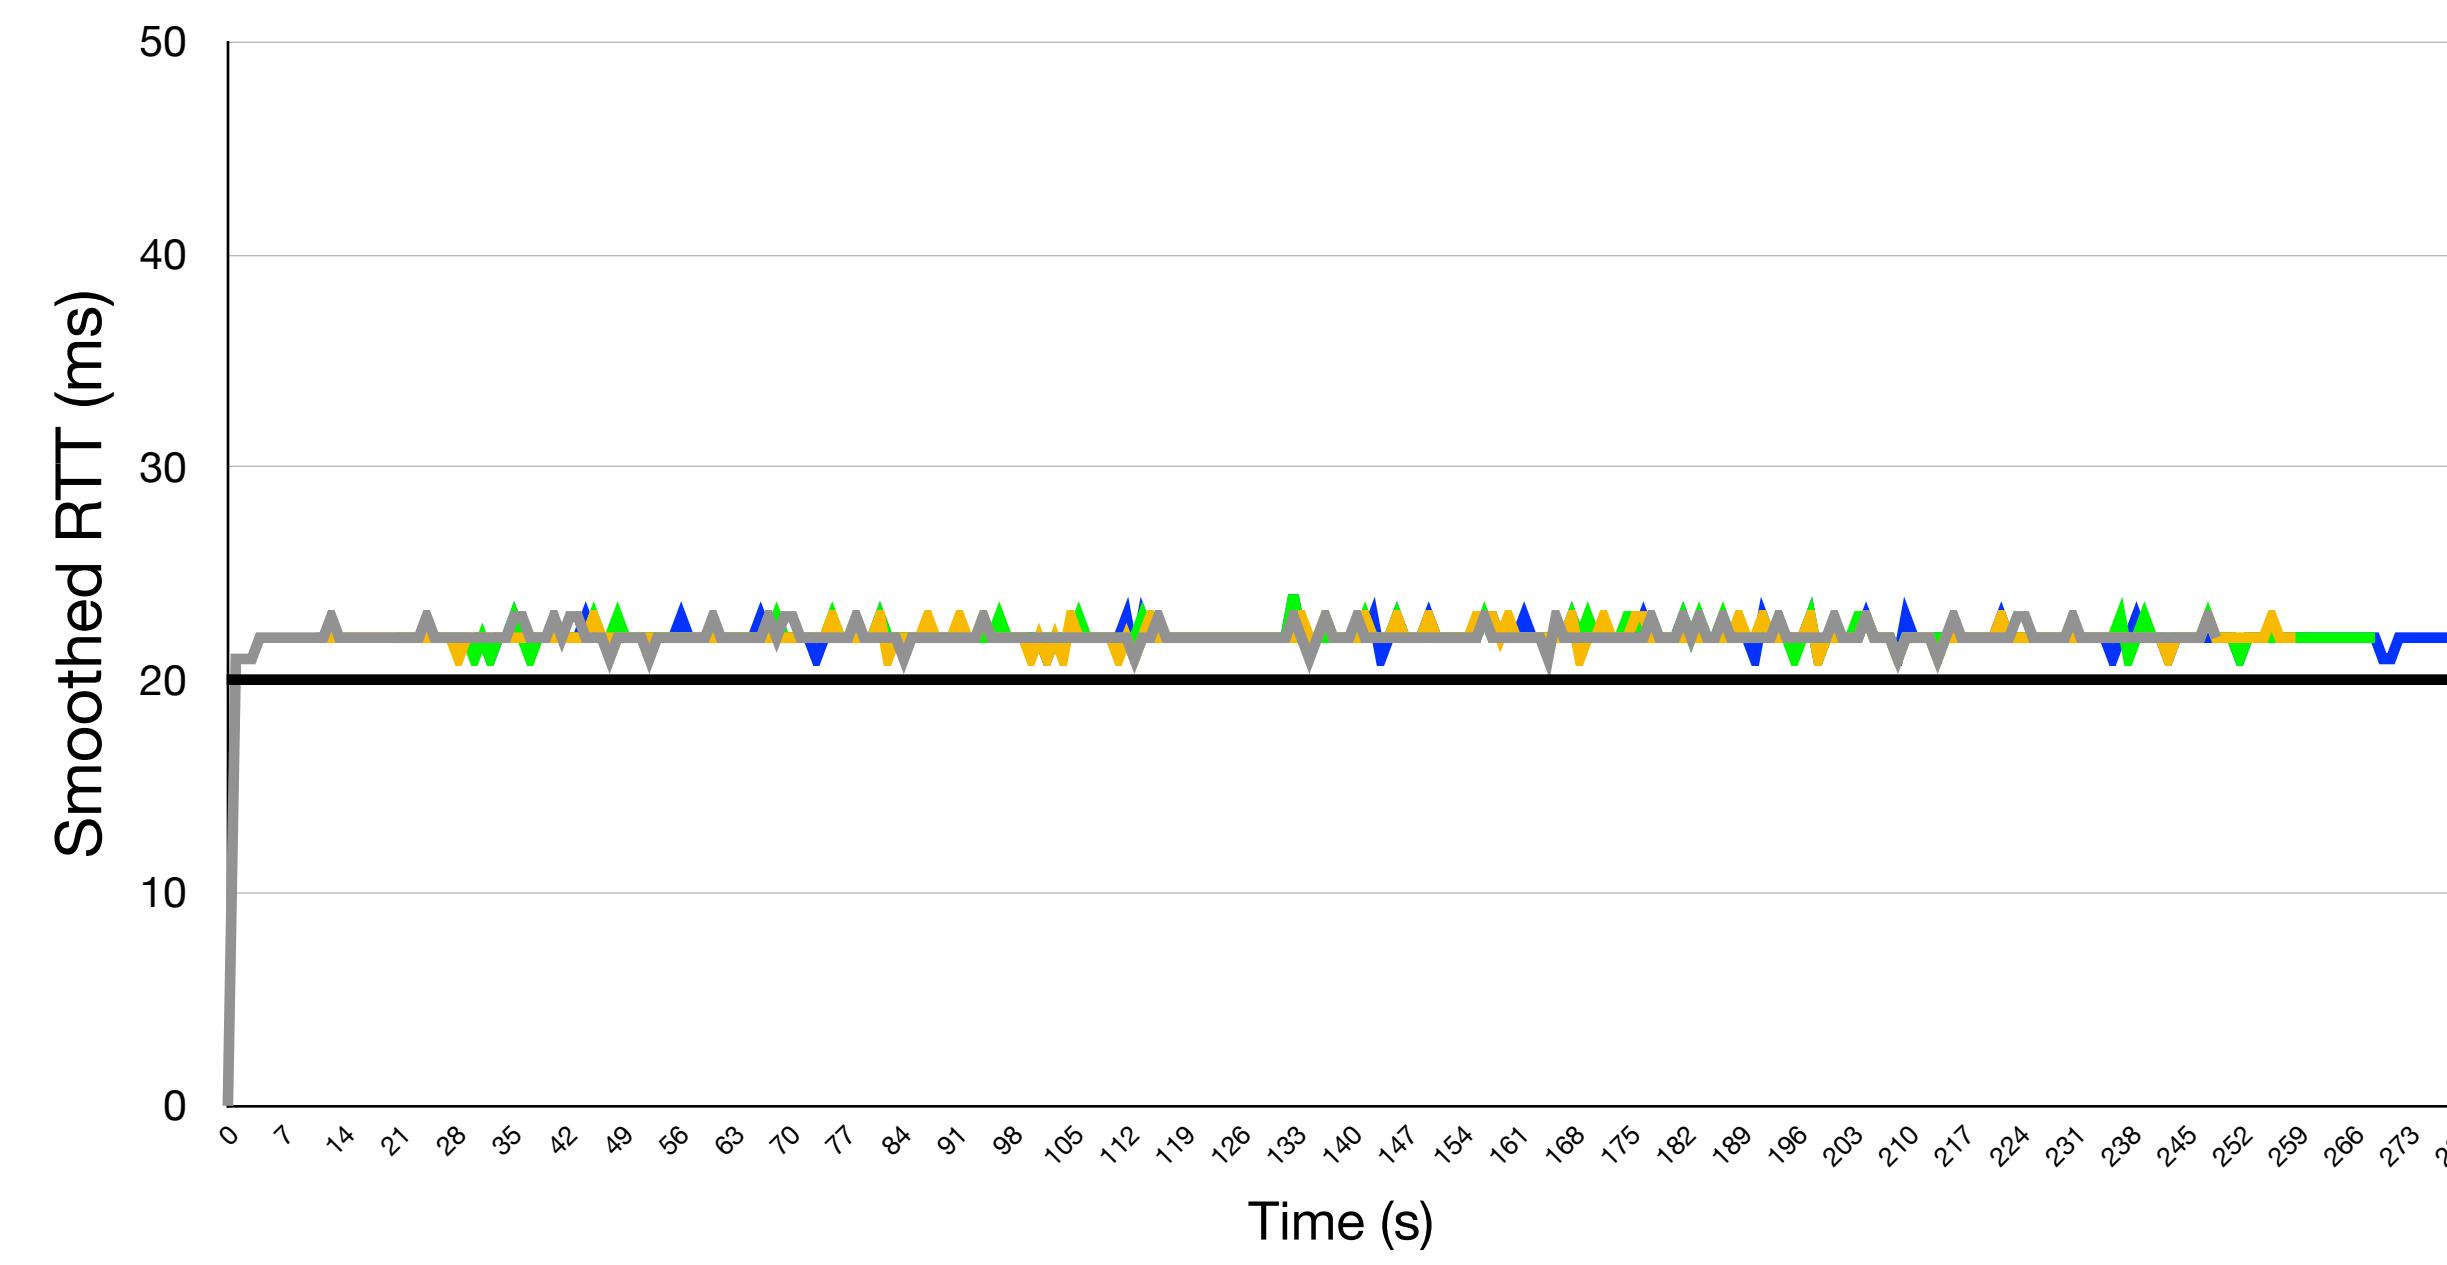

Multiple staggered flows

120 Mbps, 20ms RTT

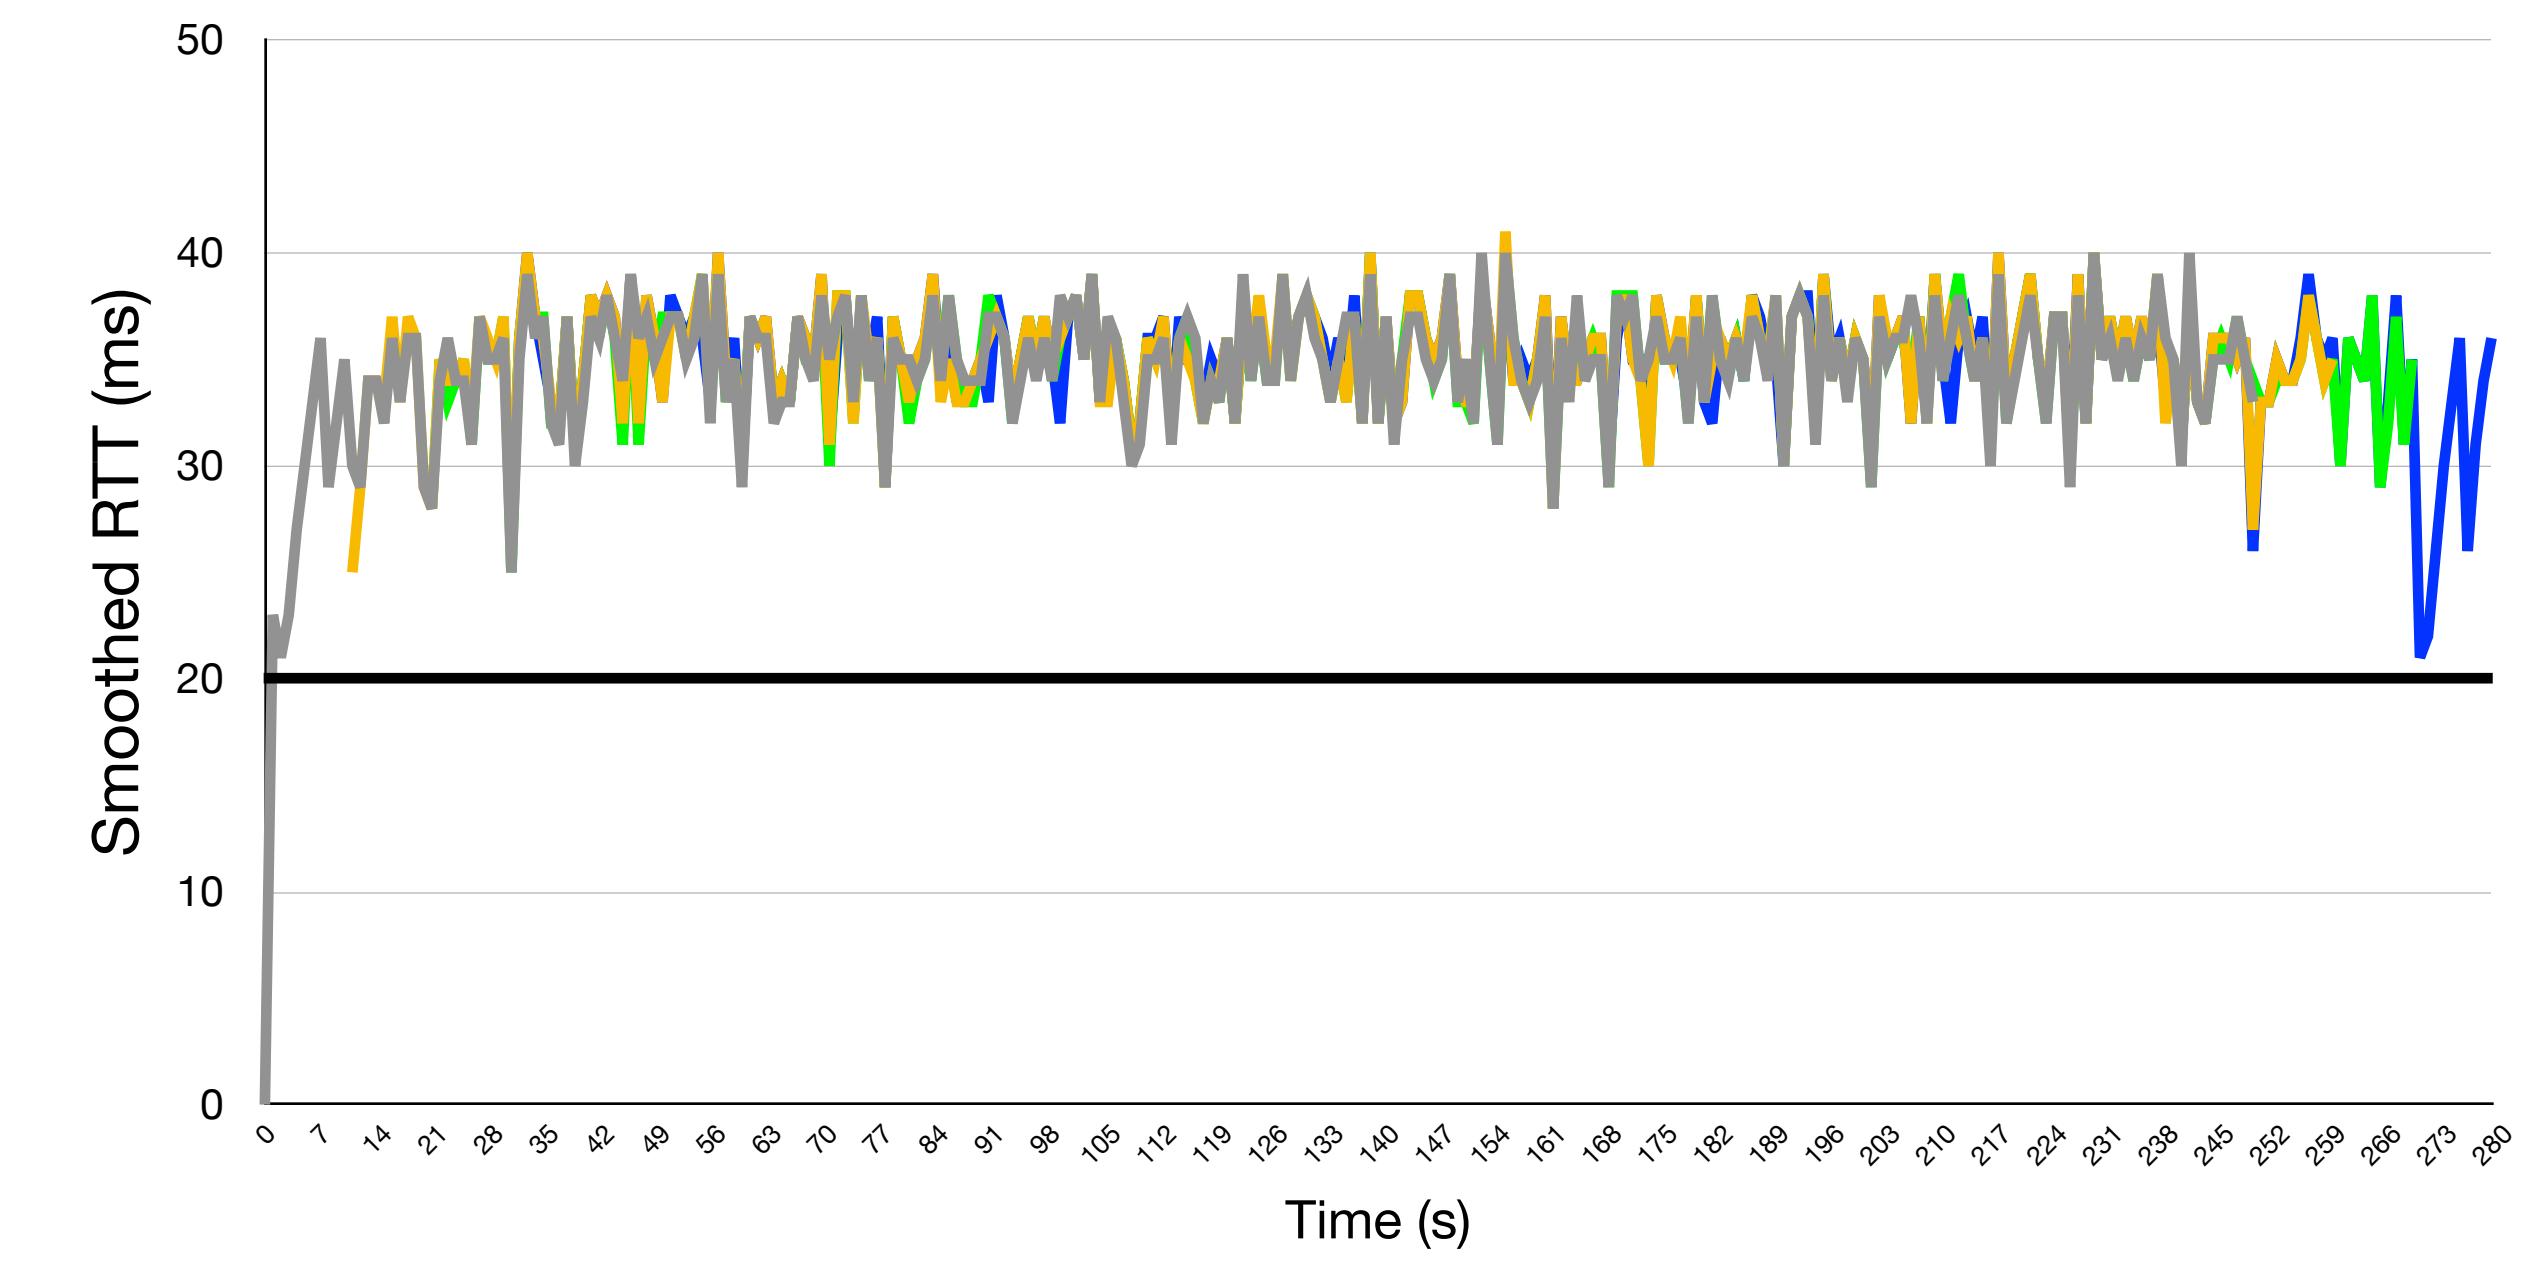

Multiple staggered flows

— Flow 1 — Flow 2 — Flow 3 — Flow 4

Prague

120 Mbps, 20ms RTT

Cubic

Prague IETF draft

Loss behavior

Use Cubic or Reno for reduction as well as increase during CA

(Investigate) Combine reduction due loss and CE in the same round

Pacing considerations

- Congestion control in user space (eg. QUIC Cubic)
 - Skew in user space timers
 - On linux, offload to kernel
 - SO_MAX_PACING_RATE and FQ qdisc
 - SO_TXTIME (qdisc should support timestamp)
- Congestion control in kernel (eg. TCP Prague)
 - On linux, set sk_pacing_rate and tso_segs
