What's new in 02?

- App vs. Device role
 - App side can be natively defined (e.g., app. server)
 - Hub is Uplink in star networks
 - Else session / connection opener
- SCHC Instances (a P2P session)
 - Can be implicit (traditional LPWAN)
 - Or tied to lower layer session or connection

What's Next

- Dependency on rechartering:
- Impacts on IPv6 (SCHC NH)
- SCHC over foo
