MPLS 1st Nibble

draft-kbbma-mpls-1stnibble-02

Kompella, Bryant, Bocci, Mirsky, Andersson

Some discussion

- Primarily on the MPLS Open Design Team

- NOTE: PSD incorporates existing constructs such as PW CW, detnet CW, BIER header, etc.

- Some concerns:
  - Why a registry?   Incorporates PSD
  - Does this registry mimic the IP version registry?   NO
  - Can we "mandate" PSD (aka CW) for non-IP traffic?   Yes and no
  - Should signaling of PSD be in control plane, data plane or both?
                                                                                   To be debated

Discussion Notwithstanding, Progress This

- Is this draft useful?

- Does it belong in the IETF? In the MPLS WG?

- Is it a good enough starting point for WG adoption?
