Registration Data Dictionary

draft-ietf-regext-datadictionary-02

Steve Crocker (author)

Heather Flanagan (editor)

Current Status

- Feedback:
  - Ongoing concern that the draft will drive policy
  - Support from the RIR space, including potential overlap RFC 2622 and RFC 7485

- Response:
  - IETF defines "if you're going to do something, this is how to do it"; it does not set policy
  - Propose to add additional text to the Introduction and Abstract, "This is not intended to promote policy development."
  - Data Dictionary is intended to be broadly applicable to RIRs, ccTLD operators, and gTLD operators

Next Steps

- Add text (or remove for now) to all TBD items
  - Protection
  - Nexus
  - Person
  - Personal
  - Source & Method
  - Payment History
  - Transaction History
  - User Account ID
