Identity Header Error Handling
draft-ietf-stir-identity-header-errors-handling-02

STIR Working Group
IETF 114 - 7/26/22

SOMOS®

01 -> 02

- Changed "ppt" to "ppi", PASSporT identifier

- Added IANA request for "ppi" as parameter name for Reason Header

- Made compact form the recommended form (given security issues brought up), but haven't removed support for full form

SOMOS®

List Discussion

- Christer - asking about announcing support for reason header, specific to this specification/"STIR" protocol

  - Not aware of a precedent for announcing support for Reason Header protocols or parameters

- Paul - resolving finishing "draft-ietf-sipcore-multiple-reasons" before sending error-handling to WGLC

- Being more explicit about the use-cases for multiple errors or constraints on a single cause code for each "ppi"

- Should we not remove the Reason header but only remove "ppi" and only for full form (not for compact form)?

- Should we be more specific to only allow STIR specific cause codes and not other SIP? (I think yes) Also, what about future proofing for new STIR cause codes.

SOMOS®

Onward

- Some valid questions for clarification, so another round is warranted.
