

draft-ietf-stir-passport-rcd-19

STIR Working Group
IETF 114 - 7/26/22

Changes 17->19

- These changes have been almost exclusively editorial and language clarity changes as discussed on the STIR list.
- Appreciate all of the editorial feedback (Jack, Russ, Ben, Christer) to update Abstract/Intro descriptions to make sure they were consistent with latest updates to the normative parts of the spec and other clarifications, additions to examples, etc. (to include “icn”)
- One normative language change in security considerations is in the following sentence where MUST was changed to SHOULD:
 - “Whether its identities, alternate identities, images, logos, physical addresses, all of the information contained in a RCD PASSporT must follow some form of vetting in which the authoritative entity or user of the information being signed **SHOULD** follow an applicable policy of the eco-system using RCD.”

Are we there yet?
