Brief Review

• A single BIER sub-domain covers multiple underlay routing protocol regions (Autonomous Systems or IGP domains).
  • How do we redistribute BIER information between them?

• What if BGP-LU is used, and BIER prefixes are not redistributed into other IGP areas/domains?
  • Border routers advertise their own BIER prefixes with a BIER proxy range sub-TLV to list external BFR-IDs that are reachable via them.
Update from 00-02

- The layout and description of this draft have been improved greatly.
- Thanks for all the comments received.
