

jscontact

IETF 115, Calendaring Extensions (calext)

Mario Loffredo & Robert Stepanek, November 8, 2022

All drafts complete

- draft-ietf-calext-jscontact-04
- draft-ietf-calext-jscontact-vcard-03
- draft-ietf-calext-vcard-jscontact-extensions-01

draft-ietf-calext-jscontact

Select updates

- Introduce PartialDate and TimeStamp (with UTC offset) types for anniversaries.
- Split “resources” into specific properties: media, onlineServices, links, cryptoKeys, calendars, directories, schedulingAddresses.
- Define (calendar) scheduleAddresses using JSCalendar scheduling methods
- Remove JSCalendar-style timezones. IANA names only, preserve any other vCard TZ values in extension property.

draft-ietf-calext-jscontact-vcard

draft-ietf-calext-vcard-jscontact-extensions

Select updates

- Organize document with focus on vCard to JSContact conversion. Cover types, parameters, properties as presented in their original drafts.
- Add DERIVED parameter to vCard, work around mandatory FN property.
- Add new vCard properties and parameters (CREATED, PRONOUNS, et al).
- Define to map “label” property to de facto standard X-ABLabel property
- Define one way to convert unknown or x-properties between vCard and JSContact.
- Convert between vCard and JSContact without loss of information.

Let's start WGLC after IETF

- Will add any in-meeting changes now to docs.
- Publish new version for last call.
