

draft-ical-tasks

IETF 115 London, calext

November 7, 2022

VSTATUS

- Defined this new component to allow for better reporting.
- New REASON property (was a parameter) which allows for a codified reason.
- New SUBSTATE property
- Updated spec to make use of all these - greatly simplified.

11.2: REASON

- Used to indicate the reason for change in status or participation
- If we make use of PARTICIPANT and VSTATUS this should be a property not a parameter.
- Does SUMMARY mean the same? Maybe REASON shows intent better

PARTIPANT

- Use PARTICIPANT to group properties. Can attach more than one status to that particular participant.
- Again simplified things.

DURATION, ESTIMATED-DURATION etc

- Some discussion around this. Perhaps need to clarify.
- See other slides about DTSTART + DURATION for VTODO in 5545.

Alignment with Json work

- Perhaps use the coming weeks to align the specs.
- If this spec comes out before jsTasks should it contain any json representations?

Further extensions

- There have been some discussions on further extensions to tasks.
- Maybe these should be pushed out to the jsTask work which will result in icalendar extensions.
