

The Mesh The Multiverse and EVERYTHING

Phill Hallam-Baker

In case you missed it

End-to-end security takes time:

“If you want to deliver an end-to-end secure app in 2023, best start in 2018”

The Mesh is designed to support

- End-to-end secure private key management
- End-to-end secure data at rest
- End-to-end secure messaging, email, sharing of large files
- End-to-end secure chat, voice, video

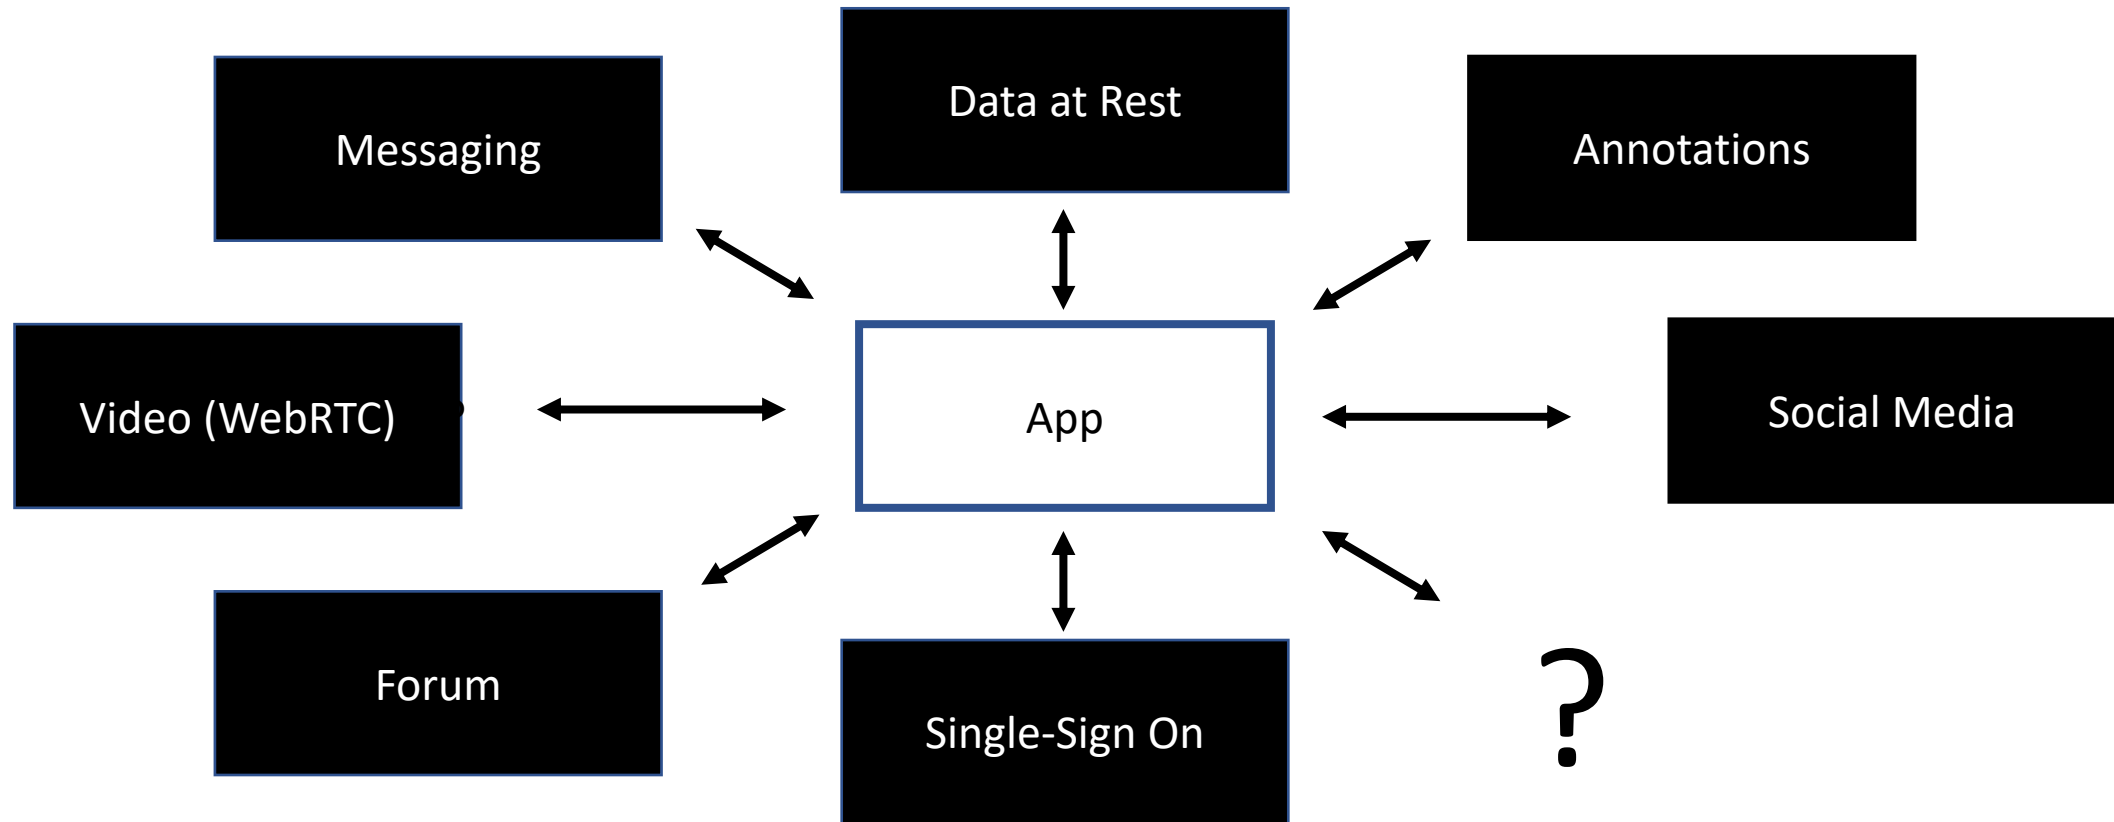

The Mesh is designed to support

- End-to-end secure private key management
- End-to-end secure data at rest
- End-to-end secure messaging, email, sharing of large files
- End-to-end secure chat, voice, video
- **End-to-end secure small group collaboration**
- **End-to-end secure large group collaboration**
- **End-to-end secure social media**

A complete communications infrastructure

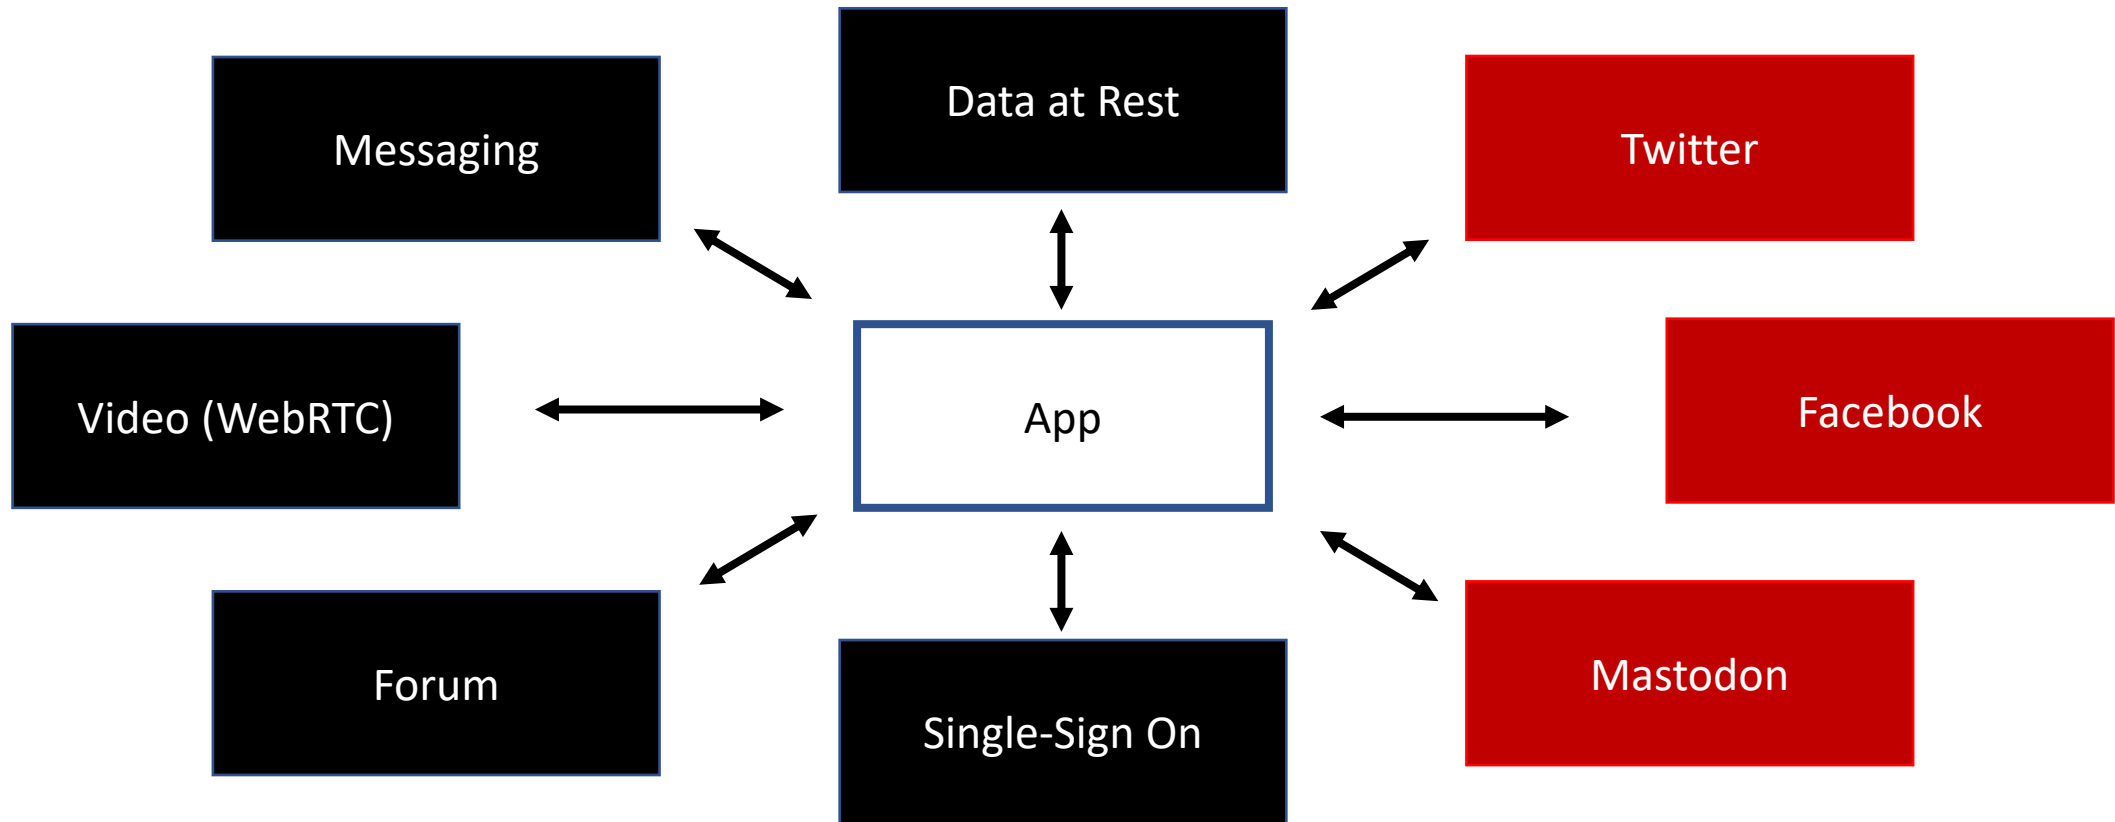

So why not build an Open Social Media?

- Accounts belong to users, not their service provider
- Users choose their service provider, can change at any time
- Users choose curators providing feeds that meet their needs

- A multiverse of all points of view

Hang on, what about Mastodon?

What to call it?

Everything
