

Identity Header Error Handling

draft-ietf-stir-identity-header-errors-handling-07

STIR Working Group
IETF 115 - 11/8/2022

02 -> 07 changes

- Updated Introduction to provide more comprehensive text on background and problem statement and pointing to existing STIR specifications on AS and VS and PASSporT definitions.
- Clarification of “Any provisional SIP Response message or final response message, with the exception of a 100 (Trying), MAY contain one or more Reason header fields with a STIR related cause code defined in {{RFC8224}} or future specifications.”
- Changed many of the SHOULDs to MUSTs based on Murray’s review, which is right recommendation.
- Clarification on a single Reason header corresponding to single error for identity header.
- Clarification of using “STIR” cause code for only STIR defined errors, RFC8224 or future defined.
- Other changes were editorial or smaller clarifications
