

WISH IETF 116 Notes

- Recharter topic
 - Removed brand names
 - Removed the point that players are outside of the charter
 - Tim Panton: too broad. We need a paragraph to state that the goal is not to solve all signaling problems with WebRTC
 - Tim Panton volunteered to provide a paragraph to limit the scope.
- Status of WHIP
 - WGLC call ended with some smaller issues, which got addressed
 - Two small PRs are going to be merged right after the meeting and a new revision of the draft is going to be created.
 - A final version of the draft is going to be published after the meeting, and a new WGLC is going to be started.
 - Nils will share shepdherd writeup with Sergio for review
- WHEP
 - what happens if the client requests a resolution layer which requires more bandwidth than the servers congestion control.
 - the server should probably be allowed to send a resolution lower than what the client requested
 - add non-normative text describing what the server is allowed and what not
 - Sergio is concerned that this could result in people claiming that there is not enough guidance
 - Next steps: adopt the WHEP draft once the group has been rechartered.
 - Hopefully done before meeting in SF
 -
