

GitHub labels in IETF-related GitHub Repos

- GitHub repos come with a starter set of labels
 - Many of them are useful, but the starter set isn't perfect for everyone
- Mathis Engelbart's repo contains an AVTCORE WG spec
 - Mathis asked me if we were using the right labels
- It occurred to me to ask the WG chairs list, and there isn't a right list
 - And that's fine, but then I wondered if we could give any help at all
- This is NOT about writing a BCP, or picking colors, or, really, anything else
- It's just me, trying to be helpful.
- IFF your WG has one or more repos that have labels that work for you
 - THEN please send me a pointer via email
- THANKS!
