

draft-bash-rfc7958bis:
DNSSEC Trust Anchor
Publication for the Root Zone

Paul Hoffman
(also Jakob, Guillaume, and Joe)
IETF 117, Fran Cansisco
July 2023

Basics

- Why revise?
- Why so soon?
- What's next

Why revise (1)

- Changes already in the -00:
 - There is a significant technical change from erratum
 - Added the optional public key element
 - The reference to the DNSSEC Practice Statement was updated
 - Say explicitly that the XML documents might have XML comments in them

Why revise (2)

- Maybe re-open the discussion of whether IANA should be publishing the PKIX and CSR files, and when
 - This requires a discussion between the WG and IANA
- Appendix A needs to be filled in with the actual steps that happened for KSK 2017
- Smaller miscellaneous stuff

Why so soon?

- August 2016 is sooo long in the past
- The DNS community learned a lot about the trust anchors in 2017 and 2018
- IANA will roll the KSK key again in a few years
- IANA will soon publish a plan for rolling the KSK algorithm

What's next

- WG adoption?
 - If not, how should the changes be made in a way for developers and deployers will know about them?
- Look in your code for the changed parts
