JMAP for Migration and Data Portability

IETF 117

https://datatracker.ietf.org/doc/draft-baum-jmap-portability/01/

JMAP Portability v1

New version addresses all points from last IETF 116:

- Return constant values and errors instead of just omitting properties and be more specific about how to implement it.
- Recommend usage of description property for serverFail and invalidArguments errors to reduce ambiguity
- Require Core/echo for all use cases

Moved parts into separate documents:

- JMAP Debug Logging https://datatracker.ietf.org/doc/draft-baum-jmap-debug
- JMAP Backend Info https://datatracker.ietf.org/doc/draft-baum-jmap-backend-info
- JMAP REST Mapping https://datatracker.ietf.org/doc/draft-baum-jmap-rest

Adopt Portability?
