High Priority & Easy
- We have an early allocation for this
- We have deployment experience

Multicast
They can certainly enjoy a refresh because of the latest specs
Have we sufficient deployment experience?
(Not necessarily bis documents, the whole multicast can be revised/reorganized)

These are more deployment reports/considerations rather than protocol development.

Should the WG include one document about deployment considerations to include these and future deployments considerations?

Should be a living document?

Should include RFC 6832?
Does the WG see any NEW future work?

NEW future work != single drafts on single topics
