MoQ WG, San Francisco, July 2023

GitHub organizational updates

'Naming' tag renamed to 'Terminology' because people didn't like the name

Added 'Implementation Blocker' for issues that need to be fixed before one can implement from the spec

Added 'Needs Discussion' for issues that are worth discussing at an interim or IETF meeting

Leaving non-editorial issues out for a week before merging, plus some approval guidelines (needs a couple +1s?), sounds reasonable, along with surfacing big issues on the list and summarizing changes at interims and plenaries.

Proposed Process

Both the mailing list and Github are places where design discussions can occur

PRs that fix design issues will remain open for at least a week before merging, plus some approvals

Large design changes will be publicized on the list

A draft will be cut before each interim or plenary

Changes will be summarized at interims and plenaries

Other Issues?
