

The logo features a stylized, layered geometric shape resembling a cube or a stack of planes, rendered in shades of light blue and grey. The text is centered within this graphic.

# MoQ Transport

[moq-transport](https://moq-transport.com)

MoQ WG, San Francisco, July 2023

# Welcome!

# Issue Summary

~~76~~ 78 [Open Issues](#)

15 Marked Architectural

More likely are and haven't been tagged

Created a new 'Naming' tag, please use it for pure naming

Some just need a PR, if so, feel free to write one

Or tag with "Needs PR" and I will

Some are quite old and need to be updated, closed, etc

# Github workflow

Issues can always be reopened, ideally with new information

Please try to keep issues as 'Editorial' or 'Design'

- Create a separate issue if needed

- Please try to be specific about the problem to be solved

Some issues today are 'Proposals'

- I prefer discussing proposals on Issues -> PR?

- Issue -> PR instead of *Issue -> Proposal -> PR*

Any other suggestions or thoughts?

[RFC8874](#) discusses GitHub Usage Guidance

# Some issues possibly out of scope for transport?

- Slice as a segment ([#57](#))
  - Independent slices should be supported, anything special?
- Relay Modifying Payload ([#216](#))
  - Transport protocols deliver data
- Failover when QUIC is not available ([#88](#))
  - Do we need an editorial PR?
- Muxing Multiple Broadcasts ([#87](#))

Created a new **NotTransport** tag and Will can triage those

## Who chooses Track ID? (#145)

SUBSCRIBE\_OK includes a mapping:

Track ID (int) -> Track Name (string)

However, received OBJECTs will be undecodable until receipt of SUBSCRIBE\_OK (ex. delayed due to packet loss)

Proposal: Move it from SUBSCRIBE\_OK to SUBSCRIBE

# Split Control and Data Streams ([#138](#), [#137](#), [#105](#))

QUIC streams are HoL blocking, which can be a feature

If all Control messages are over a single stream,  
ordering is well defined

Putting data of different priorities on a single stream

Defeats efforts to utilize QUIC's lack of HoL blocking

But draft is agnostic on stream usage

# Streaming Format Negotiation ([#208](#))

Proposal (thanks vasilvv@):

1. Every catalog format has a pre-defined well-known catalog track name (e.g. `warp-catalog`, `loc-catalog`, etc)
2. Extend SUBSCRIBE message so that it can accept multiple track names, and only subscribe to the first one that exists.

# Clean Subscribe Termination ([#222](#))

No FIN functionality

- Reset w/no error?
- New frame?
- Catalog update?

# SUBSCRIBE ambiguity (#204)

Prefixes vs Exact Match

Other Issues?
