

# A Secure Selection and Filtering Mechanism for the Network Time Protocol with Khronos

draft-ietf-ntp-chronos-23

- Following IESG evaluations, we changed draft. The main modifications are:
  - A security vs. load considerations section was added.
  - We elaborated Khronos poll and system processes section
    - Including notification in case time shifting attack was detected.
  - We added a section regarding operation considerations
  - The implementation status was elaborated.
- We would like to thank the draft shepherd Dieter Sibold and to all the WG members for helping us improve it.
